SUBJECT INDEX

A

α-toxin
  virulence genes of *Clostridium perfringens* and, 333–54
Abcesses
  postinjection
    nosocomial outbreaks caused by nontuberculous mycobacteria and, 453–85
ABC-type drug transporters
  lantibiotics and, 41, 52–53, 55, 59–60
  Trypanosoma brucei surface receptors and transporters, 763–64
Accessory functions
  lantibiotics and, 41
ace operon
  acetate metabolism regulation and, 137, 146–55
Acetate metabolism
  regulation of by protein phosphorylation in enteric bacteria
    acetate operon, 146–55
    alternate pathways, 134–35
    comparison of different species, 140–41
    conversion of acetate to acetyl CoA, 129–30
    differential expression, 148–49
    effectors, 153–54
    enzymes and regulation, 133–34
    FadR, 151
    fatty acid catabolism, 130–31
    FruR, 151–53
    glyoxylate bypass, 131–35
    growth of bacteria on acetate, 129–30
    IclR, 149–50
    inactivation mechanism, 139–40
    introduction, 128–29
    isocitrate dehydrogenase, 135–41
    isocitrate dehydrogenase kinase/phosphatase, 141–46
    metabolites, 155
    nature and role, 131–32
    negative control, 149–51
    positive control, 151–54
    reversible phosphorylation, 137–39
    sensitivity amplification, 145–46
    structural genes, 146–48
Acetyl CoA
  acetate metabolism regulation and, 129–130, 132–33, 135, 155
Acinetobacter calcoaceticus
  acetate metabolism regulation and, 141
  hybrid pathways for chloroaromatics and, 302, 304
Acinetobacter spp.
  hybrid pathways for chloroaromatics and, 304
Acquired immunodeficiency syndrome (AIDS)
  nosocomial outbreaks caused by nontuberculous mycobacteria and, 470–71
Acridines
  history of research, 23
Actagardine
  lantibiotics and, 45–47, 49–50, 65
Actin
  cell polarity and morphogenesis in budding yeast, 697, 700–1, 706–8
Actin-binding proteins
  cell polarity and morphogenesis in budding yeast, 697, 700–1
Actinomyces spp.
  bacterial multicellularity and, 82, 94
  modular organisms and, 110, 118
Actinomycetales spp.
  microbial dehalogenation of chlorinated solvents and, 428
Actinomycin D
  malarial parasite metabolism and, 575
Actinoplanes spp.
  lantibiotics and, 45
Activation
  HIV-1 Rev protein and, 510–13
  virocrine transformation and, 401–10
Adaptive benefits
  bacterial multicellularity and, 81–97
  modular organisms and, 119
Adaptive self-organization
  chemotaxis-based
    cooperative organization of bacterial colonies and, 791–92
Adelberg, EA, 1–38
Adenine
  Trypanosoma brucei surface receptors and transporters, 762–63
Adenosine
  Trypanosoma brucei surface receptors and transporters, 747, 761–63
Adenosine triphosphate (ATP)
  anti-σ factors and, 250–51
  Trypanosoma brucei surface receptors and transporters, 748
S-Adenosylmethionine
  Trypanosoma brucei surface receptors and transporters, 762
Adenoviruses
  nuclear targeting of animal DNA viruses and, 628, 634–35, 657–61
Adenylate cyclase
  Trypanosoma brucei surface receptors and transporters, 745–71
Aerobacter aerogenes
  acetate metabolism regulation and, 140
  thymineless death and, 593
Aerotaxis
  anaerobiosis in *Bacillus subtilis* and, 185
African trypanosomiasis
  Trypanosoma brucei surface receptors and transporters, 745–71
Aging
  Saccharomyces cerevisiae and, 533–55
Agro-food applications
  lantibiotics and, 66, 71
Alamethicin
  lantibiotics and, 61
Alanine

acetate metabolism regulation and, 140
lantibiotics and, 44, 48, 53, 67–68
Alanine amino transferase
malarial parasite metabolism and, 577
Albumax
malarial parasite metabolism and, 577
Alcaligenes denitrificans
hybrid pathways for chloroaromatics and, 300–1
Alcaligenes eutrophus
anaerobiosis in *Bacillus subtilis* and, 181
anti-σ factors and, 235
hybrid pathways for chloroaromatics and, 295, 300–4
Alcaligenes spp.
hybrid pathways for chloroaromatics and, 298, 300–1
Aldolase
malarial parasite metabolism and, 566
Algae
history of research, 2
malarial parasite metabolism and, 583
Alginate
anti-σ factors and, 259–61
Alg proteins
anti-σ factors and, 259–61
*allo*isoleucine
lantibiotics and, 44
Alternative electron acceptors
anaerobiosis in *Bacillus subtilis* and, 165–86
Alternative medicine
contaminated biologics for, 467–68
Alternative splicing
HIV-1 Rev protein and, 493–97
α-Amanitin
Trypanosoma brucei surface receptors and transporters, 755
Amiloride
history of research, 36–37
Amino acids
acetate metabolism regulation and, 140, 153
anti-σ factors and, 236, 243, 245
cooperative organization of bacterial colonies and, 795–96
history of research, 4–5, 16–22, 32–33, 38
HIV-1 Rev protein and, 497, 502–3, 505–6, 508–13, 518, 520
lantibiotics and, 41–44, 46, 48–54, 57–60, 67–68, 70
malarial parasite metabolism and, 576–78, 582
paclitaxel and, 389
Trypanosoma brucei surface receptors and transporters, 746, 756, 758, 761, 768–69
virulence genes of *Clostridium perfringens* and, 342–43, 347, 354
α-Aminobutyric acid
history of research, 32
Anabaena spp.
acetate metabolism regulation and, 141
Anaerobic-aerobic conditions combined
microbial dehalogenation of chlorinated solvents and, 440–41
Anaerobic bioreactor granules
bacterial multicellularity and, 81, 91–92
Anaerobiosis
Bacillus subtilis and, 165–86
microbial dehalogenation of chlorinated solvents and, 423–47
Anaplerotic pathway
acetate metabolism regulation and, 127–56
Ancovenin
lantibiotics and, 45, 48, 64
Animal DNA viruses
nuclear targeting of
adenoviruses, 657–61
cell nuclear entry machinery, 633, 636–38
entry, 659–60
hepadnaviruses, 661–66
herpesviruses, 652–57
HSV-1, 652–57
introduction, 628–30
life cycle, 642–45, 649–61
nuclear envelope, 633, 636
nuclear import, 641–42, 645–48, 651–52, 655–57
nuclear pore complex, 633, 636, 648–49
nuclear targeting events, 631–35
papillomaviruses, 639–42
papovaviruses, 638–49
particle size, 630
parvoviruses, 649–52
perspective, 666–69
polyomaviruses, 642–47
protein nuclear entry, 636–38
reliance on nuclear function, 630–31
replication cycle, 639–41
replication in nucleus, 630–35
structure, 639–45, 649–55, 657–61
SV40, 647–49
uncoating, 659–60
Animals
aging in *Saccharomyces cerevisiae* and, 544–46
history of research, 17, 31–37
lantibiotics and, 41
modular organisms and, 105–6, 118, 123
virulence genes of *Clostridium perfringens* and, 333–54
Anopheles gambiae
malarial parasite metabolism and, 565
Anopheles stephensi
malarial parasite metabolism and, 565, 574
Antagonists
bacterial multicellularity and, 94
Antibiotics
history of research, 1, 6, 8
HIV-1 Rev protein and, 512
lantibiotics and, 41–71
malarial parasite metabolism and, 569, 575–76
thymineless death and, 591, 597, 602, 604, 612
Trypanosoma brucei surface receptors and transporters, 755–56
Antibodies
malarial parasite metabolism and, 566
Trypanosoma brucei surface receptors and transporters, 746–47, 750–51, 757–58, 761, 764–65, 767, 770
Anticancer drugs
thymineless death and, 591, 613
Antigenic variation
Trypanosoma brucei surface receptors and transporters, 745–71
Antimycin A
malarial parasite metabolism and, 569
Anti-σ factors
in avirulence
FlgM in *Salmonella* virulence, 271–72

MucA in *Pseudomonas* virulence, 272
perspectives, 272–74
bacteriophage T4 AsiA protein
anti-anti-σ factor SpoIIA, 247
anti-F^{70} factor, 236
anti-σ^{70} of *Escherichia coli*, 235–38
flagellar-specific secretion, 244–46
FlgM anti-σ factor and flagellar biosynthesis, 238–40, 243
FlgM role in coupling gene, 241–42
late promoter transcription by gp55, 237
middle promoter activation by MotA, 236–37
native FlgM in unfolded state, 243
regulation of FlgM by export through BBH intermediate structure, 244
SpoIIAB factor, 247
temporal regulation of T4 transcription, 235–36
transcription of flagellar regulon coupled to flagellar morphogenesis, 238–40
DnaK anti-σ factor in regulation of heat-shock response
bacterial heat shock response, 254–55
DnaK as anti-σ^{32} factor, 255–57
DnaK, DnaJ, and GrpE negative regulators of heat-shock response, 255
Escherichia coli, 255
ECF subfamily of σ factors and their anti-σ factors, 257–59
Escherichia coli FecI (σ^{FecI})-FecR, 270–71
Escherichia coli RpoE (σ^{E}) and RseA, 270
identification of RpoE, 266–67
modulation of RpoE activity by protein status, 267–68
other regulators of σ^{E} activity, 269
RseA is an anti-σ^{E} factor, 268–69
temperature-dependent regulation of RpoE, 267
introduction, 233–35
Myxococcus xanthus CarQ (σ^{CarQ}) *and CarR*
carotenoid pigment production, 263
carotenoid regulon, 263–65
CarR is an anti-σ^{CarQ} factor, 265
other regulators of σ^{CarQ}, 265–66
Photobacterium sp. strain SS9 rpoE locus, 270
Pseudomonas aeruginosa AlgT (AlgU, σ^{22}) and MucA
AlgT and MucA proteins are regulators of alginate biosynthesis in *Pseudomonas* sp., 259–63
MucA is an anti-σ^{22} factor, 261–62
other σ^{22} regulators, 262
Pseudomonas putida PupI (σ^{PupI})-PupR, 270–71
RsbW anti-σ factor of *Bacillus* regulates stress response
anti-anti-σ factor RsbW, 250
anti-σ factor RsbW, 250
regulation by phosphorylation of RsbV, 250
RsbU-RsbV-RsbW regulatory module response to ATP levels, 250–51
RsbX-RsbR-RsbS-RsbT regulatory moduie responds to environmental stress, 251–54
SpoIIAB factor in *Bacillus* sporulation regulatory cascade, 246
SpoIIE factor, 247–49
Apicomplexans
malarial parasite metabolism and, 583
Apoptosis
thymineless
in prokaryotes and eukaryotes, 591–616
Aquifer environments
complex
microbial dehalogenation of chlorinated solvents and, 430–31
Arabinose
history of research, 8
ara operon
history of research, 23
Archaebacteria
modular organisms and, 106, 110, 117
Arginine
HIV-1 Rev protein and, 502–3, 506, 513
virulence genes of *Clostridium perfringens* and, 347
Arkansas
microbial dehalogenation of chlorinated solvents and, 443–44
Ascidians
modular organisms and, 106
Asexuality
malarial parasite metabolism and, 561–83
modular organisms and, 106, 122
AsiA form bacteriophage T4
anti-σ factors and, 231
Asparagine
acetate metabolism regulation and, 140
Aspartate
acetate metabolism regulation and, 140
lantibiotics and, 43, 54
virulence genes of *Clostridium perfringens* and, 342, 347
Aspartate amino transferase
malarial parasite metabolism and, 577
Asymmetric cell division
aging in *Saccharomyces cerevisiae* and, 542
cell polarity and morphogenesis in budding yeast, 687–731
A system
history of research, 32
Atlantic Ocean
CO_2 fixation in chemoautotrophs and, 196
Atovaquone
malarial parasite metabolism and, 569, 573–74
Australia
modular organisms and, 112
Automated endoscope washers
contaminated
nontuberculous mycobacteria and, 477–79
Autotrophs
CO_2 fixation in chemoautotrophs and, 192–94
Avirulence
anti-σ factors and, 271–72
Axial budding
cell polarity and morphogenesis in budding yeast, 691–99
Axl proteins
cell polarity and morphogenesis in budding yeast, 693–96
Ayxotrophic mutants
thymineless death and, 597
Azolla spp.

modular organisms and, 108
Azotobacter vinelandii
anti-σ factors and, 235

B

"Baby machine"
yeast
aging in *Saccharomyces cerevisiae* and, 546
Baccatin III
paclitaxel and, 385–86, 392
Bacillus anthracis
thymineless death and, 593, 596
Bacillus cereus
virulence genes of *Clostridium perfringens* and, 341–42
Bacillus circulans
cooperative organization of bacterial colonies and, 796
Bacillus licheniformis
anaerobiosis in *Bacillus subtilis* and, 173
Bacillus megaterium
thymineless death and, 593
Bacillus sphaericus
virulence genes of *Clostridium perfringens* and, 346
Bacillus spp.
bacterial multicellularity and, 87
lantibiotics and, 45, 64
modular organisms and, 113
Bacillus subtilis
anaerobic growth of
electron transfer pathway, 184
fermentation, 182–83
fnr gene, 171–72, 176–77, 180–81
introduction, 166–67
Krebs cycle, 183–84
metabolism during anaerobic growth, 183–84
misellaneous factors, 184
narK gene, 171
nitrate reductase, 168–71
nitrate respiration, 167–68, 175–82
nitrite-dependent induction of *hmp* expression, 181–82
nitrite reductase, 173–75
nitrite respiration, 173–82
phospholipids, 184
pyruvate metabolism, 183
regulatory pathways, 175–82
ResD-ResE two-component signal transduction system, 172–73, 175–76
resE suppressor mutant, 177–79
anti-σ factors and, 231, 235, 242, 245–46, 248–54, 263
bacterial multicellularity and, 81, 84–85, 87–88, 90, 95
cell polarity and morphogenesis in budding yeast, 688
CO_2 fixation in chemoautotrophs and, 211
cooperative organization of bacterial colonies and, 783
lantibiotics and, 45, 60, 67
thymineless death and, 593, 596, 598–600, 602, 607–9
virulence genes of *Clostridium perfringens* and, 337, 348
Bacillus thurengiensis
thymineless death and, 593, 596, 598
virulence genes of *Clostridium perfringens* and, 345–46
Bacteria
cooperative organization of, 779–803
history of research, 5–8
malarial parasite metabolism and, 578
multicellularity of bacterial populations and, 81–97
thymineless death and, 591–93, 596–97
Trypanosoma brucei surface receptors and transporters, 749, 771
Bacteriocins
lantibiotics and, 42, 60, 66, 69–71
thymineless death and, 601
Bacteriophages
acetate metabolism regulation and, 153
history of research, 11, 22, 28
thymineless death and, 591, 593, 596–97, 605, 607
Bacteriophage T4
anti-σ factors and, 231, 235
thymineless death and, 593
Bagels
cooperative organization of bacterial colonies and, 796–98, 800
Basal body-hook structure
anti-σ factors and, 240, 243–44, 246
Bdellovibrios
modular organisms and, 117
Beggiatoa spp.
CO_2 fixation in chemoautotrophs and, 194, 196
Benthic invertebrates
sessile
modular organisms and, 105–6
Benzene genes
hybrid pathways for chloroaromatics and, 308–10
Bifunctional enzymes
acetate metabolism regulation and, 127, 137, 141–45
Biocatalytic hydrolysis
paclitaxel and, 370–74
Biochemistry
lantibiotics and, 41
thymineless death and, 599–600
Biodegradation
microbial dehalogenation of chlorinated solvents and, 432–33
Biofilms
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455–57
Biomedical effector molecules
peptide-based
lantibiotics and, 41, 68, 71
Biopterin
Trypanosoma brucei surface receptors and transporters, 755–56
Bioremediation
intrinsic
microbial dehalogenation of chlorinated solvents and, 423–47
Biosynthetic enzymes
lantibiotics and, 41, 69
Biotechnology
lantibiotics and, 41, 66–69, 71
Biphenyl genes
hybrid pathways for chloroaromatics and, 305–7
Bipolar budding
cell polarity and morphogenesis in budding yeast, 697, 700–4
Black smokers
CO_2 fixation in chemoautotrophs and, 196
Bloodstream
Trypanosoma brucei surface receptors and transporters, 748, 752–559, 766, 768, 770
Bloom's syndrome
thymineless death and, 616
Blue-green algae
history of research, 8
Bovine papilloma virus (BPV)

E5 protein
virocrine transformation and, 401–5
Branching
modular organisms and, 105, 107, 115–17
Breast cancer
paclitaxel and, 361–92
5-Bromouracil
history of research, 22
Bronchoscopy-related pseudo-outbreaks
nosocomial outbreaks caused by nontuberculous mycobacteria and, 472–79
Bryozoans
modular organisms and, 106, 108–10
Budding
modular organisms and, 105
yeast
aging and, 533–55
cell polarity and morphogenesis in, 687–731
bud genes
cell polarity and morphogenesis in budding yeast, 702
Bud proteins
cell polarity and morphogenesis in budding yeast, 693–97
Bud scar accumulation
aging in *Saccharomyces cerevisiae* and, 540–41
Burkholderia cepacia
hybrid pathways for chloroaromatics and, 295–97, 304, 307, 319, 322
Burkholderia spp.
hybrid pathways for chloroaromatics and, 310

C

C-7 xylosidase
paclitaxel and, 361–92
C-10 deacetylase
paclitaxel and, 361–92
C-13 taxolase
paclitaxel and, 361–92
Ca^{2+}
Trypanosoma brucei surface receptors and transporters, 756
Caenorhabditis elegans
aging in *Saccharomyces cerevisiae* and, 534–35
cell polarity and morphogenesis in budding yeast, 688
California
microbial dehalogenation of chlorinated solvents and, 437–38, 443–44
Calvin-Benson-Bassham cycle
CO_2 fixation in chemoautotrophs and, 191, 207–9
Calvin cycle
CO_2 fixation in chemoautotrophs and, 191–22
Cancer
paclitaxel and, 361–92
thymineless death and, 613
Candida albicans
cell polarity and morphogenesis in budding yeast, 695
Candida cylindraceae
paclitaxel and, 375, 380
Candida guillermondi
paclitaxel and, 382
Candida spp.
paclitaxel and, 379
Carbohydrates
history of research, 2, 7–8
malarial parasite metabolism and, 564–72
Carbon dioxide
acetate metabolism regulation and, 127
fixation
chemoautotrophs and, 191–222
Carbon flux
acetate metabolism regulation and, 127–56
Carboxysomes
CO_2 fixation in chemoautotrophs and, 191–222
Cardiac surgery
nontuberculous mycobacteria and, 464–66
Carex spp.
modular organisms and, 112
Carnobacterium piscicola
bacterial multicellularity and, 85
lantibiotics and, 45
Carnocin U149
lantibiotics and, 45
Carotenoids
anti-σ factors and, 263–66
Cascades
anti-σ factors and, 246–49
Catabolism
fatty acid
acetate metabolism regulation and, 130–31
Caulobacter cresentus
anti-σ factors and, 245
Caulobacter spp.
history of research, 8
Caves
CO_2 fixation in chemoautotrophs and, 196
cbb genes
CO_2 fixation in chemoautotrophs and, 191, 207–9, 211–12, 214–17, 220–22
CbbR transcriptional regulator
CO_2 fixation in chemoautotrophs and, 191, 207–11, 214–22
CDC genes
cell polarity and morphogenesis in budding yeast, 693
Cdc42p protein
cell polarity and morphogenesis in budding yeast, 687–731
Cecropins
lantibiotics and, 42
Cell-cell communcation
cooperative organization of bacteria and, 779–803
Cell cycle
aging in *Saccharomyces cerevisiae* and, 533–55
cell polarity and morphogenesis in budding yeast, 720–25, 729–30
malarial parasite metabolism and, 562–74, 576
Cell differentiation
bacterial multicellularity and, 81–97
modular organisms and, 117, 123
Cell division
aging in *Saccharomyces cerevisiae* and, 533–55
cell polarity and morphogenesis in budding yeast, 687–731
Cell division of labor
bacterial multicellularity and, 81, 92–93
modular organisms and, 123
Cell fate determination
cell polarity and morphogenesis in budding yeast, 719–20
Cell nuclear entry machinery
nuclear targeting of animal DNA viruses and, 633, 636–38
Cell polarity
budding yeast and, 687–731
Cell signal transduction pathways
virocrine transformation and, 397–414
Cell wall
cell polarity and morphogenesis

in budding yeast, 693–96, 713–14
Central degradative sequences
hybrid pathways for chloroaromatics and, 292–94
Centrifugal elutriation
aging in *Saccharomyces cerevisiae* and, 547
Chaperones
intramolecular lantibiotics and, 59
Checkpoints
budding
cell polarity and morphogenesis in budding yeast, 723–25
Cheese
lantibiotics and, 66
Chemoautotrophs
carbon dioxide fixation in
autotrophic growth substrates, 193
Calvin cycle, 192–211, 216–17
carboxysomes, 202–9
cbb genes, 207–9, 216, 220–22
communities depending on chemoautotrophy, 195–97
enzymes, 199–211
facultative autotrophs, 192–93
free-living autotrophs, 193–94
hypothesized functions, 205–6
induction, 216–17
introduction, 192
isoenzymes, 200–2
obligate autotrophs, 192–93
phylogeny, 209–12
polyhedral body relationship to carboxysomes, 206–7
superinduction, 216–17
symbiotic autotrophs, 194–95
regulation of gene expression
Calvin cycle genes, 212–13
cbb promoters, 214
CbbR and *cbb* promoter interactions, 217–18
ligands of CbbR, 218–19
LysR-type regulator CbbR, 215–19
mechanism of action, 217
mRNA processing, 215
phospho-relay system, 220
photoautotrophic bacteria, 219–20
repressors, 219–20
transcriptional regulation, 214–15, 219–22
transcriptional termination, 215
Chemotaxis
rotational
cooperative organization of bacterial colonies and, 779, 787, 791–92, 799–800
Chemotherapy
malarial parasite metabolism and, 583
thymineless death and, 592, 613
Trypanosoma brucei surface receptors and transporters, 745
Chimeric proteins
Trypanosoma brucei surface receptors and transporters, 769
China
modular organisms and, 121
Chiral morphotype
cooperative organization of bacterial colonies and, 779, 782–83, 786, 788
Chlamydomonas reinhardtii
CO_2 fixation in chemoautotrophs and, 206
Chlorinated solvents
microbial dehalogenation of, 423–47
Chlorine resistance
nosocomial outbreaks caused by nontuberculous mycobacteria and, 458
Chloroaromatics
mineralization of by patchwork assembly
benzene genes, 308–10
biphenyl genes, 305–7
central degradative sequences, 292–94
central pathway for chlorocatechols, 299–303
chlorobenzene-degrading strains, 320–21
chlorobenzene genes, 308–10
chlorobenzoate-degrading strains, 314–18
chlorobiphenyl-degrading strains, 318–20
chlorocatechol genes, 310–11
chlorotoluene-degrading strains, 318
concept of patchwork assembly, 289–90
degradative pathway segments, 290–94
enzyme specificity of degradative sequences for chlorinated compounds, 294–303
future research, 321–23
gene organization, 305–12
gene transfer by plasmids, 303–5
induction potential of chlorinated compounds, 311, 313–14
introduction, 288–89
modified *ortho* pathway, 292–93
oxoadipate genes, 311–12
3-oxoadipate pathway, 293–94
peripheral, funneling sequences, 290–92
peripheral pathways with a history for chloroaromatics, 297–99
peripheral pathways without a history for chloroaromatics, 294–97
production of functioning hybrid pathway, 314–21
toluene genes, 308–10
xylene genes, 307–8
Chlorobenzene-degrading strains
hybrid pathways for chloroaromatics and, 320–21
Chlorobenzene genes
hybrid pathways for chloroaromatics and, 308–10
Chlorobenzoate-degrading strains
hybrid pathways for chloroaromatics and, 314–18
Chlorobiphenyl-degrading strains
hybrid pathways for chloroaromatics and, 318–20
Chlorocatechol
hybrid pathways for chloroaromatics and, 287–323
Chlorogloeopsis fritschii
CO_2 fixation in chemoautotrophs and, 202, 204
Chlorotoluene-degrading strains
hybrid pathways for chloroaromatics and, 318
Chondromyces crocatus
modular organisms and, 118
Chromatium vinosum
CO_2 fixation in

chemoautotrophs and, 208, 210, 215–16
Chromatophores
history of research, 8
Chromosomes
history of research, 17, 23–30
virulence genes of *Clostridium perfringens* and, 333–35, 337–38, 342–44, 350, 352–54
Chronological life span
aging in *Saccharomyces cerevisiae* and, 538–39
Cinnamycin
lantibiotics and, 45–49, 53–54, 64
Circular dichroism spectroscopy
lantibiotics and, 50
Circular RNA-molecules
aging in *Saccharomyces cerevisiae* and, 533–55
cis-3-acetoxy-4-phenyl-2-azetidinone
paclitaxel and, 380–81
cis-aconitate
Trypanosoma brucei surface receptors and transporters, 750
Clathrin-coated vesicles
Trypanosoma brucei surface receptors and transporters, 766
Clonality
acetate metabolism regulation and, 153
malarial parasite metabolism and, 566
modular organisms and, 105–23
Trypanosoma brucei surface receptors and transporters, 771
Clonal senescence
aging in *Saccharomyces cerevisiae* and, 552–53
Clostridia spp.
lantibiotics and, 61
Clostridium bifermentans
virulence genes of *Clostridium perfringens* and, 341
Clostridium difficile
virulence genes of *Clostridium perfringens* and, 346
Clostridium histolyticum
virulence genes of *Clostridium perfringens* and, 343
Clostridium perfringens
genetic organization of extracellular toxin genes
α-toxin structural gene, 339–43
β-toxin, 346
ε-toxin, 345–46
ι-toxin, 346–47
κ-toxin, 343–45
θ-toxin, 343–45
chromosomes, 337–39, 351–52
colA gene, 343–45
cpb gene, 346
cpe gene, 351–52
enterotoxin production, 353–54
enterotoxin structural gene, 351–52
etx gene, 345–46
future perspectives, 354
global regulation of extracellular toxin production, 348–49
iab gene, 346–47
iap gene, 346–47
location of several toxin genes on extrachromosomal elements, 339
nan genes, 347–48
pfoA gene, 343–45
plasmids, 351–52
plc gene, 339–43
pleiotropic toxin mutants, 348–49
sialidase genes, 347–48
structure-function studies, 353–54
two-component signal transduction, 349–51
virR and *virS* genes, 349–51
introduction, 334
pathogenesis of infectious diseases
clostridial myonecrosis, 334–35
domestic animal diseases, 336–37
enteritis necroticans, 336
food poisoning, 335–36
gas gangrene, 334–35
Clostridium septicum
virulence genes of *Clostridium perfringens* and, 347
Clostridium sordellii
virulence genes of *Clostridium perfringens* and, 347
Clostridium spiriforme
virulence genes of *Clostridium perfringens* and, 346
Clostridium spp.
microbial dehalogenation of chlorinated solvents and, 434
Coat
surface
Trypanosoma brucei surface receptors and transporters, 745–71
colA gene
virulence genes of *Clostridium perfringens* and, 343–45
Colicinogenic factors
thymineless death and, 605
Collagenase
virulence genes of *Clostridium perfringens* and, 333–36, 338, 350, 353–54
Collective defense
bacterial multicellularity and, 94
Colon cancer
thymineless death and, 613
Colonial development
bacterial
cooperative organization of, 779–803
Co-metabolic oxidations/reductions
microbial dehalogenation of chlorinated solvents and, 428–30
Communicating walkers model
cooperative organization of bacterial colonies and, 787, 789–90
Communities
bacterial
CO_2 fixation in chemoautotrophs and, 195–97
Comamonas testosteroni
hybrid pathways for chloroaromatics and, 294
Compartment-specific gene expression
anti-σ factors and, 247–49
Complexity
microbial dehalogenation of chlorinated solvents and, 430–31
modular organisms and, 105–6
Conjugation
history of research, 17, 24–30
thymineless death and, 607–8
Conjugative gene transfer
hybrid pathways for chloroaromatics and, 287–323
Conserved regions
anti-σ factors and, 234
Constitutive transport elements
HIV-1 Rev protein and, 519–20
Contaminated biologics for alternative medicine
nontuberculous mycobacteria and, 467–68

Contamination
bronchoscope
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453–85
groundwater
microbial dehalogenation of chlorinated solvents and, 424–47
Cooperative organization
of bacterial colonies
chemotaxis-based adaptive self-organization, 791–92
C morphotype, 782–83, 786, 788
communicating walkers model, 789–90
Escherichia coli, 792–96
introduction, 780–83
modeling, 793–95, 800–1
morphotype transitions, 788–89
myxobacteria, 801–2
pattern formation, 792–96
perspective, 802–3
physiological characterization, 792–93
rotational chemotaxis, 799–800
Salmonella typimurium, 792–96
spiral vortex morphotype, 797–98
T morphotype, 782–85
vortex formation, 799
vortex morphotype, 782–83, 796–800
Coordinated multicellular behavior
bacterial multicellularity and, 81–97
Copy DNA (cDNA)
Trypanosoma brucei surface receptors and transporters, 747
Corals
modular organisms and, 106
Corynebacterium glutamicum
acetate metabolism regulation and, 141
Corynebacterium spp.
thymineless death and, 596
Costs
microbial dehalogenation of chlorinated solvents and, 445–47
Coumermycin
thymineless death and, 604
cph gene
virulence genes of *Clostridium perfringens* and, 346
cpe gene
virulence genes of *Clostridium perfringens* and, 351–52
Crithidia spp.
Trypanosoma brucei surface receptors and transporters, 757–58
C-terminal domain
Trypanosoma brucei surface receptors and transporters, 749–50, 767, 769–70
Cunninghaemella echinulata
paclitaxel and, 389
Cyanide
malarial parasite metabolism and, 570, 572–73
Cyanobacteria
history of research, 8
modular organisms and, 110
Cyclic adenosine monophosphate (cAMP)
aging in *Saccharomyces cerevisiae* and, 533–55
Cyclin-dependent kinases
cell polarity and morphogenesis in budding yeast, 720–25, 729–30
Cyclins
cell polarity and morphogenesis in budding yeast, 722–23
Cycloguanil
malarial parasite metabolism and, 573
Cycloheximide
malarial parasite metabolism and, 578
Cylindrospermum licheniforme
bacterial multicellularity and, 85
Cypemycin
lantibiotics and, 43–45
Cysteine
acetate metabolism regulation and, 140
lantibiotics and, 43–44, 48–50, 52, 58, 70
malarial parasite metabolism and, 577
Cystine
malarial parasite metabolism and, 577
Cytidine deaminase
thymineless death and, 595
Cytochrome *b*
malarial parasite metabolism and, 569–71, 582
Cytochrome *c* oxidase
malarial parasite metabolism and, 568–69
Cytokinesis tag model
cell polarity and morphogenesis in budding yeast, 697
Cytolysins
lantibiotics and, 45, 49, 52–53, 56, 58–59, 70
Cytoplasm
anti-σ factors and, 231
CO_2 fixation in chemoautotrophs and, 191
HIV-1 Rev protein and, 491–521
malarial parasite metabolism and, 566
nuclear targeting of animal DNA viruses and, 628
Cytosine deaminase
thymineless death and, 595
Cytoskeleton
actin
cell polarity and morphogenesis in budding yeast, 697, 700–1, 706–8
Trypanosoma brucei surface receptors and transporters, 759, 761, 766

D

Daughter cells
aging in *Saccharomyces cerevisiae* and, 533–55
dCTP deaminase
thymineless death and, 595
Deacetylase
paclitaxel and, 361–92
10-Deacetylbaccatin III
paclitaxel and, 370–74
Death
thymineless
in prokaryotes and eukaryotes, 591–616
Dedicated proteases
lantibiotics and, 41
Defensins
lantibiotics and, 42
Dehalobacter restrictus
microbial dehalogenation of chlorinated solvents and, 429
Dehalococcoides ethogenes
microbial dehalogenation of chlorinated solvents and, 429, 436
Dehalogenation
microbial, 423–47
Dehalorespiration
microbial dehalogenation of chlorinated solvents and, 429
Dehalospirillum multivorans

microbial dehalogenation of chlorinated solvents and, 429, 436
Dehydrating enzymes
lantibiotics and, 57–58
Delaware
microbial dehalogenation of chlorinated solvents and, 443–44
Denitrifying conditions
microbial dehalogenation of chlorinated solvents and, 437
deo operon
thymineless death and, 597
Deoxynucleotide diphosphate kinase
thymineless death and, 595
Deoxyribonucleotide kinase
thymineless death and, 595
Deoxyuridine triphosphatase
thymineless death and, 595
Dephosphorylation
acetate metabolism regulation and, 127, 143
anti-σ factors and, 249
Desulfitobacterium chlororespirans
microbial dehalogenation of chlorinated solvents and, 429
Desulfitobacterium dehalogenans
microbial dehalogenation of chlorinated solvents and, 429
Desulfomonile tiedjei
bacterial multicellularity and, 92
microbial dehalogenation of chlorinated solvents and, 429
Determinate structure
modular organisms and, 105
Development
bacterial colony
cooperative organization of, 779–803
malarial parasite metabolism and, 561–64, 574–75, 579–81
modular organisms and, 105–23
Dialysis-related outbreaks
nontuberculous mycobacteria and, 469–70
Diamidines
Trypanosoma brucei surface receptors and transporters, 762, 771
Dictyostelium spp.
modular organisms and, 118
Didehydroalanine
lantibiotics and, 43–44, 46, 48, 52, 58, 64, 66–68
Didehydrobutyrine
lantibiotics and, 43–44, 48–49, 68
Differential expression
acetate metabolism regulation and, 148–49
malarial parasite metabolism and, 581–82
Differentiation-inducing factor (DIF)
Trypanosoma brucei surface receptors and transporters, 749
Dihydrofolate
malarial parasite metabolism and, 573–74
Dihydrofolate reductase
malarial parasite metabolism and, 573
Dihydroorotate dehydrogenase
malarial parasite metabolism and, 572–74
Dimerization
Trypanosoma brucei surface receptors and transporters, 749–50, 765, 768–70
Diplococcus pneumoniae
thymineless death and, 593, 596, 602, 610
Diploidy
aging in *Saccharomyces cerevisiae* and, 543
anti-σ factors and, 246
cell polarity and morphogenesis in budding yeast, 690–92, 696–97, 700–2
Distal-less gene
modular organisms and, 116
Distilled water
nosocomial outbreaks caused by nontuberculous mycobacteria and, 457–58
Diterpene moiety
paclitaxel and, 388–89, 391–92
DNA damage
thymineless death and in prokaryotes and eukaryotes, 591–616
DNA gyrase
thymineless death and, 604
DNA helicases
thymineless death and, 604
DnaJ factor
anti-σ factors and, 255
DnaK factor
anti-σ factors and, 231, 254–57
DNA polymerase
thymineless death and, 595, 604–5, 614
DNA repair
thymineless death and in prokaryotes and eukaryotes, 591–616
DNA supercoiling
anaerobiosis in *Bacillus subtilis* and, 185
DNA synthesis
malarial parasite metabolism and, 576
DNA viruses
animal
nuclear targeting of, 627–69
Domains
HIV-1 Rev protein and, 504–8
Trypanosoma brucei surface receptors and transporters, 749–50, 752, 756, 764, 767, 769–70
Domestic animals
virulence genes of *Clostridium perfringens* and, 336–37
Dominant aging substance
aging in *Saccharomyces cerevisiae* and, 544
Dormant cells
bacterial multicellularity and, 95
Double glycine cleavage site
lantibiotics and, 53–54, 59–60
Double-stranded DNA (dsDNA) breaks
thymineless death and, 591, 601–2, 610, 614–15
Doubling
modular organisms and, 119
Droopy buds
cell polarity and morphogenesis in budding yeast, 696
Drosophila spp.
aging in *Saccharomyces cerevisiae* and, 534, 537, 552
cell polarity and morphogenesis in budding yeast, 688, 693
history of research, 4
Drug transporters
Trypanosoma brucei surface receptors and transporters, 763–64
Duramycins
lantibiotics and, 45, 48, 50

E

ϵ-toxin
virulence genes of *Clostridium perfringens* and, 333–54
E5 protein
BPV

virocrine transformation and, 401–5
ECF subfamily
anti-σ factors and, 257–59
Ecocyc database
history of research, 16
Ecology
CO_2 fixation in chemoautotrophs and, 191–92
history of research, 2
modular organisms and, 105–23
Economics
microbial dehalogenation of chlorinated solvents and, 445–47
Edman degradation
lantibiotics and, 44
Effectors
acetate metabolism regulation and, 153–54
hybrid pathways for chloroaromatics and, 287–323
lantibiotics and, 41, 68, 71
Eggs
lantibiotics and, 66
Electron acceptors/donors
anaerobiosis in *Bacillus subtilis* and, 165–86
microbial dehalogenation of chlorinated solvents and, 432–36
Electron transfer pathway
anaerobiosis in *Bacillus subtilis* and, 184
malarial parasite metabolism and, 568–72, 582
Trypanosoma brucei surface receptors and transporters, 748
Embryogenesis
modular organisms and, 105, 108
Endocytosis
Trypanosoma brucei surface receptors and transporters, 748, 759, 766, 771
Endonucleases
thymineless death and, 605
Energy-yielding oxidations/reductions
microbial dehalogenation of chlorinated solvents and, 428–30
Enteric bacteria
acetate metabolism regulation and, 127–56
Enteritis necroticans
virulence genes of *Clostridium perfringens* and, 336
Enterococcus faecalis
bacterial multicellularity and, 85
lantibiotics and, 45
Enterococcus spp.
lantibiotics and, 49, 70
thymineless death and, 593, 596
Enterotoxemic diseases
virulence genes of *Clostridium perfringens* and, 333–54
Entry
nuclear targeting of animal DNA viruses and, 659–60
Envelope
nuclear
HIV-1 Rev protein and, 491–521
targeting of animal DNA viruses and, 633, 636
env gene
HIV-1 Rev protein and, 493–98, 516
Environmental factors
anti-σ factors and, 251
cell polarity and morphogenesis in budding yeast, 703–4
cooperative organization of bacterial colonies and, 779
malarial parasite metabolism and, 561
Enzymes
acetate metabolism regulation and, 127–56
CO_2 fixation in chemoautotrophs and, 191, 199–211
hybrid pathways for chloroaromatics and, 294–303
lantibiotics and, 41, 52, 57–60, 64–65, 69
malarial parasite metabolism and, 565–68, 570, 572–74, 577–78, 582
paclitaxel and, 361–92
thymineless death and, 594–95, 600, 604–6, 614–16
epiA gene
lantibiotics and, 57
Epicidin
lantibiotics and, 45–46, 52–53, 60
Epidemiology
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455–59
Epidermal growth factor (EGF)
history of research, 34–35
putative
Trypanosoma brucei and, 759–60
Epidermin
lantibiotics and, 43, 45–48, 52, 56–57, 59–60, 68
Epigenetic silencing
aging in *Saccharomyces cerevisiae* and, 533–55
Epilancin K7
lantibiotics and, 44–46, 48, 52
Epimastigote
Trypanosoma brucei surface receptors and transporters, 749
epiT gene
lantibiotics and, 59
Epstein-Barr virus (EBV) virus LMP-1
virocrine transformation and, 409–10
Erwinia amylovora
anti-σ factors and, 235
Erwinia carotovora
bacterial multicellularity and, 88, 93–94
Erwinia chrysanthemi
anaerobiosis in *Bacillus subtilis* and, 181
Erythrocytic cycle
malarial parasite metabolism and, 561–66, 568, 570–71, 574, 576–77, 579–80, 582–83
Erythro-3-hydroxy aspartic acid
lantibiotics and, 44
Erythromycin
thymineless death and, 612
Erythropoietin receptor
virocrine transformation and, 405–7
Escherichia coli
acetate metabolism regulation and, 129, 131, 133–34, 136–40, 142–45, 147, 149–53, 155–56
anaerobiosis in *Bacillus subtilis* and, 167–68, 171–72, 179, 181–85
anti-σ factors and, 231, 233, 235–39, 242, 254–58, 262, 266–71, 273
bacterial multicellularity and, 82, 85–86, 88–89, 93–96
CO_2 fixation in chemoautotrophs and, 206
cooperative organization of bacterial colonies and, 792–96, 802
history of research, 14–26, 31–38
lantibiotics and, 43, 58
modular organisms and, 111–13

thymineless death and, 592–96, 598–610, 612–13, 615–16
virulence genes of *Clostridium perfringens* and, 335, 340–41, 344
5-N-Ethyl-N-isopropyl amiloride (EIPA)
history of research, 36
etx gene
virulence genes of *Clostridium perfringens* and, 345–46
Eubacteria
anti-σ factors and, 231, 235
modular organisms and, 106, 110, 117
Eukaryotes
acetate metabolism regulation and, 141
anti-σ factors and, 246
cell polarity and morphogenesis in budding yeast, 687–731
lantibiotics and, 42
malarial parasite metabolism and, 578
modular organisms and, 107, 117–18, 122–23
thymine metabolism and thymineless death in, 591–616
Evolution
acetate metabolism regulation and, 135
history of research, 2
modular organisms and, 105–6, 115–19, 123
Trypanosoma brucei surface receptors and transporters, 768, 771
Exflagellation
malarial parasite metabolism and, 569, 576, 578
Exonucleases
thymineless death and, 605, 615
Exoplasmic loops
Trypanosoma brucei surface receptors and transporters, 761
Export
anti-σ factors and, 243–44
HIV-1 Rev protein and, 491–521
lantibiotics and, 41
Exportin 1
HIV-1 Rev protein and, 491–521
Expression site-associated genes
Trypanosoma brucei surface receptors and transporters, 753–56
External electron acceptors
anaerobiosis in *Bacillus subtilis* and, 165–86
Extracellular parasites
malarial parasite metabolism and, 561
Extracellular toxins
virulence genes of *Clostridium perfringens* and, 333–38, 339–45, 348–54
Extrachromosomal elements
virulence genes of *Clostridium perfringens* and, 339
Extrachromosomal rDNA circles (rDNAs)
aging in *Saccharomyces cerevisiae* and, 533–55

F

Facultative autotrophs
CO_2 fixation in chemoautotrophs and, 192–93
fadR gene
acetate metabolism regulation and, 137, 151
Fairly unstructured development
modular organisms and, 113
Fatty acid catabolism
acetate metabolism regulation and, 130–31
Feedback inhibition
history of research, 20
Fermentation
anaerobiosis in *Bacillus subtilis* and, 165–86
history of research, 2
malarial parasite metabolism and, 565–66
Fertility
aging in *Saccharomyces cerevisiae* and, 543
F-genotes
history of research, 27
FG-repeat domains
HIV-1 Rev protein and, 508
Filamentation
thymineless death and, 591, 614
Filament proteins
anti-σ factors and, 244
Fitness
modular organisms and, 115
Fixation
CO_2
chemoautotrophs and, 191–222
Flagella
anti-σ factors and, 231
modular organisms and, 111–12
Flagellar pocket
Trypanosoma brucei surface receptors and transporters, 745–71
Flavobacterium spp.
hybrid pathways for chloroaromatics and, 304
FlgM factor
anti-σ factors and, 231, 238–47, 271–72
Florida
microbial dehalogenation of chlorinated solvents and, 443–44
Fluorescence-activated cell sorting
aging in *Saccharomyces cerevisiae* and, 547–48
p-Fluorophenylalanine
history of research, 21
5-Fluoroacil
thymineless death and, 613
fnr gene
anaerobiosis in *Bacillus subtilis* and, 165–86
Folate
malarial parasite metabolism and, 572–74
Trypanosoma brucei surface receptors and transporters, 756
Food additives
lantibiotics and, 66
Formaldehyde resistance
nosocomial outbreaks caused by nontuberculous mycobacteria and, 458
F-primes
history of research, 24–27
Frameshift mutations
lantibiotics and, 59
Free-living autotrophs
CO_2 fixation in chemoautotrophs and, 193–94
Friend erythroleukemia virus gp55
virocrine transformation and, 405–7
Fructose
history of research, 8
Trypanosoma brucei surface receptors and transporters, 761
Fruiting bodies
modular organisms and, 118
fruR gene
acetate metabolism regulation and, 137, 151–53
Fumarate reductase
malarial parasite metabolism and, 568
Fungi

history of research, 2
modular organisms and, 111, 118, 120, 122
thymineless death and, 593
Trypanosoma brucei surface receptors and transporters, 763

G

G1 cyclins
cell polarity and morphogenesis in budding yeast, 722–23
gag gene
HIV-1 Rev protein and, 492–98, 516
gal locus
history of research, 26–27
Gallidermin
lantibiotics and, 45–46, 53, 59, 66–68
Gallionella ferruginea spp.
CO_2 fixation in chemoautotrophs and, 194
Gametocytogenesis
malarial parasite metabolism and, 561–83
Gardimycin
lantibiotics and, 49
Gas gangrene
human
virulence genes of *Clostridium perfringens* and, 333–54
Gaylussacia brachycerium
modular organisms and, 112
Gene clusters
hybrid pathways for chloroaromatics and, 287–323
lantibiotics and, 41, 52, 55–56, 70
Gene-encoded antimicrobial peptides
lantibiotics and, 41–71
Gene therapy
HIV-1 Rev protein and, 521
Genetic engineering
microbial dehalogenation of chlorinated solvents and, 431–41
Gene transfer
hybrid pathways for chloroaromatics and, 303–5
Genetics
acetate metabolism regulation and, 137–55
aging in *Saccharomyces cerevisiae* and, 534–55
anaerobiosis in *Bacillus subtilis* and, 165–86
anti-σ factors and, 231–74
bacterial multicellularity and, 81–97
cell polarity and morphogenesis in budding yeast, 687–731
CO_2 fixation in chemoautotrophs and, 191–222
cooperative organization of bacteria and, 779–803
history of research, 3–5, 8, 10–16, 21–31, 33–37
HIV-1 Rev protein and, 491–521
hybrid pathways for chloroaromatics and, 303–21
lantibiotics and, 41–71
malarial parasite metabolism and, 561–83
modular organisms and, 113, 115–16
nuclear targeting of animal DNA viruses and, 627–69
thymineless death and, 591–616
Trypanosoma brucei surface receptors and transporters, 745–71
virocrine transformation and, 397–414
virulence genes of *Clostridium perfringens* and, 333–53
Gentian violet resistance
nosocomial outbreaks caused by nontuberculous mycobacteria and, 459
Geobacter spp.
microbial dehalogenation of chlorinated solvents and, 428
Geotrichum candidum
paclitaxel and, 375, 380
Germ cells
modular organisms and, 105, 107
Global regulatory change
malarial parasite metabolism and, 581
Gluconic acid
history of research, 8
Glucose
history of research, 8
malarial parasite metabolism and, 565–66
Trypanosoma brucei and, 745–71
Glucose phosphate isomerase
malarial parasite metabolism and, 566
GLUT1 factor
Trypanosoma brucei surface receptors and transporters, 750
Glutamate
acetate metabolism regulation and, 140
lantibiotics and, 54, 67
malarial parasite metabolism and, 577–78, 582
Glutamate dehydrogenase
malarial parasite metabolism and, 577
Glutamine
acetate metabolism regulation and, 140
anti-σ factors and, 243
malarial parasite metabolism and, 577–78
Glutaraldehyde resistance
nosocomial outbreaks caused by nontuberculous mycobacteria and, 458
Glutathione (GSH)
Trypanosoma brucei surface receptors and transporters, 763–64
Glyceraldehyde-3-phosphate dehydrogenase
malarial parasite metabolism and, 566
Glycerol
Trypanosoma brucei surface receptors and transporters, 749
Glycine
HIV-1 Rev protein and, 508
lantibiotics and, 44, 53–54, 59–60
Glycolysis
malarial parasite metabolism and, 564–66
Trypanosoma brucei surface receptors and transporters, 749
Glycoproteins
Trypanosoma brucei surface receptors and transporters, 749–50, 763–64
Glyoxylate bypass
acetate metabolism regulation and, 127–56
gp55
anti-σ factors and, 237
virocrine transformation and, 397–414
GPI anchor
Trypanosoma brucei surface receptors and transporters, 749–50, 765–66
Gram-negative bacteria

anti-σ factors and, 231
bacterial multicellularity and, 81
lantibiotics and, 44
thymineless death and, 593
Gram-positive bacteria
anaerobiosis in *Bacillus subtilis* and, 165–86
anti-σ factors and, 231
bacterial multicellularity and, 81
lantibiotics and, 41–71
thymineless death and, 593
Groundwater contamination
microbial dehalogenation of chlorinated solvents and, 424–47
Growth factors
virocrine transformation and, 397–414
Growth form genes
modular organisms and, 117
GrpE factor
anti-σ factors and, 255
GS-X pumps
Trypanosoma brucei surface receptors and transporters, 763–64
GTPase
cell polarity and morphogenesis in budding yeast, 696–97
malarial parasite metabolism and, 581
Guanine
Trypanosoma brucei surface receptors and transporters, 763
Guanosine
Trypanosoma brucei surface receptors and transporters, 762
Guanylate cyclase
Trypanosoma brucei surface receptors and transporters, 745–71

H

H^+ symporter
Trypanosoma brucei surface receptors and transporters, 763
Haemophilus influenzae
anti-σ factors and, 235, 273
thymineless death and, 602
Hansenula spp.
paclitaxel and, 379–83
Haploidy
aging in *Saccharomyces cerevisiae* and, 538, 543
cell polarity and morphogenesis in budding yeast, 689–91, 696–97, 700
malarial parasite metabolism and, 576
modular organisms and, 113
Haptoglobin
Trypanosoma brucei surface receptors and transporters, 747, 759
Heat shock response
anti-σ factors and, 254–57
Helicases
thymineless death and, 604, 616
Hemoglobin
malarial parasite metabolism and, 576
Hepadnaviruses
nuclear targeting of animal DNA viruses and, 628, 635, 661–66
Herpes simplex virus 1 (HSV-1)
nuclear targeting of animal DNA viruses and, 652–57
Herpesviruses
nuclear targeting of animal DNA viruses and, 628, 634–35, 652–57
Heterochromatin
aging in *Saccharomyces cerevisiae* and, 545
Heterodimerization
Trypanosoma brucei surface receptors and transporters, 765, 768
Hexokinase
malarial parasite metabolism and, 566
Hexose transporter
Trypanosoma brucei surface receptors and transporters, 749–51, 760–61
Hfr mutants
history of research, 24–30
High-density lipoprotein (HDL) receptor
Trypanosoma brucei and, 758–59
him genes
acetate metabolism regulation and, 137
Histidine
lantibiotics and, 48, 57
hmp gene
anaerobiosis in *Bacillus subtilis* and, 181–82
HOG1 pathway
cell polarity and morphogenesis in budding yeast, 730–31
Homodimerization
Trypanosoma brucei surface receptors and transporters, 765, 768
Homo sapiens
aging in *Saccharomyces cerevisiae* and, 535
Hospital water systems
nosocomial outbreaks caused by nontuberculous mycobacteria and, 457
Hosts
malarial parasite metabolism and, 561–83
Trypanosoma brucei surface receptors and transporters, 747, 749–50, 752–54, 756–57, 759–60, 763, 767–68, 770–71
Hox genes
modular organisms and, 116
Human host
malarial parasite metabolism and, 561–83
Human immunodeficiency virus type 1 (HIV-1) Rev protein
constitutive transport elements, 519–20
function
cellular proteins interactive with Rev NES, 510–13
domain structure, 504–7
HIV-1 mRNA nuclear export, 497–500
nuclear transport pathways, 491, 507–10
Rev nuclear transport cycle, 513–16
Rev-responsive RNAs, 491, 500–3
future research, 517–19
introduction, 492
retroviral gene expression
alternative splicing, 493–97
overview of retroviral life cycle, 492–93
RNA nuclear export problem, 493–97
as therapeutic target, 520–21
unresolved issues, 517–19
Hybrid pathways
chloroaromatics and, 288–323
Hybrid strains
mineralization of chloroaromatics and, 287–323
Hydrogen-oxidizing bacterium
history of research, 7
Hydrogenovibrio marinus
CO_2 fixation in chemoautotrophs and, 199–200, 208, 210
Hydroids

modular organisms and, 106
Hydrothermal vents
CO_2 fixation in chemoautotrophs and, 196
β-Hydroxybutyric acid
history of research, 8
Hypervariable domain
Trypanosoma brucei surface receptors and transporters, 767, 769
Hypoxanthine
Trypanosoma brucei surface receptors and transporters, 763

I

ι-toxin
virulence genes of *Clostridium perfringens* and, 346–47
iab gene
virulence genes of *Clostridium perfringens* and, 346–47
iap gene
virulence genes of *Clostridium perfringens* and, 346–47
icd gene
acetate metabolism regulation and, 137
iclR gene
acetate metabolism regulation and, 137, 147, 149–50
IgG2 antibody
Trypanosoma brucei surface receptors and transporters, 751
ilv genes
history of research, 22
Immortality
modular organisms and, 112–15
Immunology
history of research, 2, 11–12
lantibiotics and, 41, 55, 57, 60, 71
malarial parasite metabolism and, 583
Trypanosoma brucei surface receptors and transporters, 746, 749–51
Import
malarial parasite metabolism and, 576
nuclear targeting of animal DNA viruses and, 627–69
Inactivation mechanism
acetate metabolism regulation and, 139–40
Indeterminate structure
modular organisms and, 105–23
Induction
of Calvin cycle genes
CO_2 fixation in chemoautotrophs and, 216–17
potential
hybrid pathways for chloroaromatics and, 311–14
Infectious diseases
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453–85
nuclear targeting of animal DNA viruses and, 627–69
virulence genes of *Clostridium perfringens* and, 333–54
Inhibitory domains
anti-σ factors and, 234
Injection materials
nontuberculous mycobacteria and, 468
Inosine
Trypanosoma brucei surface receptors and transporters, 762
Insects
Trypanosoma brucei surface receptors and transporters, 747–50, 752–54, 756–57, 759–60
Insertion sequences
virulence genes of *Clostridium perfringens* and, 333–54
In situ hybridization
malarial parasite metabolism and, 583
Insulin
history of research, 34–35
Integration host factors
acetate metabolism regulation and, 137
Intercellular communication
bacterial multicellularity and, 81–97
Interferon γ (IFN-γ) receptor
putative
Trypanosoma brucei and, 760
Internal energy
cooperative organization of bacterial colonies and, 789, 801
Intracellular immunization
HIV-1 Rev protein and, 521
Intracellular parasites
malarial parasite metabolism and, 561
Intraorganism selection
modular organisms and, 113
Introns
HIV-1 Rev protein and, 491–521
Invariant surface glycoproteins
Trypanosoma brucei surface receptors and transporters, 764
Invasive growth pathway
cell polarity and morphogenesis in budding yeast, 727–28
Ion transport
anti-σ factors and, 231
Isocitrate dehydrogenase
acetate metabolism regulation and, 127, 135–41
malarial parasite metabolism and, 567
Isocitrate dehydrogenase kinase/phosphatase
acetate metabolism regulation and, 127, 137, 141–46
Isocitrate lyase
acetate metabolism regulation and, 127, 133–34, 137
Isoenzymes
CO_2 fixation in chemoautotrophs and, 200–2
Isolated cells
bacterial multicellularity and, 93–94
Isoleucine
cooperative organization of bacterial colonies and, 795–96
history of research, 5, 16–20, 38
lantibiotics and, 43, 68
malarial parasite metabolism and, 577
Iterated units/modules
modular organisms and, 105–23

K

κ-toxin
virulence genes of *Clostridium perfringens* and, 333–54
K^+ transport
history of research, 33–35
α-Ketoglutarate dehydrogenase
malarial parasite metabolism and, 566, 570, 577–78
Kinetics
thymineless death and, 598
Kinetoplastida
Trypanosoma brucei surface receptors and transporters, 757–58, 761
Klebsiella aerogenes
CO_2 fixation in chemoautotrophs and, 216

thymineless death and, 593
Klebsiella oxytoca
CO_2 fixation in chemoautotrophs and, 206
thymineless death and, 610
Krebs cycle
anaerobiosis in *Bacillus subtilis* and, 183–84
Kynurenine metabolism
history of research, 7

L

L5178Y cells
history of research, 32–33
lac operon
aging in *Saccharomyces cerevisiae* and, 549–50
history of research, 27, 30–31
Lactate
malarial parasite metabolism and, 565–66
Lactate dehydrogenase
malarial parasite metabolism and, 565–66
Lacticin 481
lantibiotics and, 48, 52, 56, 58
Lactobacillus acidophilus
thymineless death and, 593
Lactobacillus plantarum
bacterial multicellularity and, 85
Lactobacillus sake
bacterial multicellularity and, 85
lantibiotics and, 45
Lactobacillus spp.
thymineless death and, 596
Lactocin S
lantibiotics and, 43–47, 52, 54, 56, 58–60
Lactococcin G
lantibiotics and, 49, 60
Lactococcus helveticus
virulence genes of *Clostridium perfringens* and, 345
Lactococcus lactis
bacterial multicellularity and, 85
lantibiotics and, 45, 61, 67
virulence genes of *Clostridium perfringens* and, 345
Lactococcus spp.
lantibiotics and, 57
LAG genes
aging in *Saccharomyces cerevisiae* and, 549–50
lam gene
virulence genes of *Clostridium perfringens* and, 348
lan genes
lantibiotics and, 50, 55, 57–60, 70
Lanthionine
lantibiotics and, 43
Lantibiotics
biological activities
applications, 66–69
biosynthetic enzymes, 69
peptidoglycan biosynthesis, 64–65
phospholipase biosynthesis, 64–65
pore formation, 61–63
quorum sensing, 66
secondary effects, 64, 66
introduction, 42–43
peptide engineering, 66–68
peptide pheromones, 69–71
production
biosynthetic gene clusters, 55–56
dehydrating enzymes, 57–58
modification enzymes, 57–58
molecular genetics of biosynthesis, 55
oxidative decarboxylases, 58
prepeptides and modification reactions, 50–54
producer self-protection, 60–61
protease functions, 59–60
regulation of biosynthesis, 55, 57
thioether-forming enzymes, 57–58
transport functions, 59–60
relationships, 69–71
structural aspects
conformations, 49–50
peptide structures, 44–49
unusual residues, 43–44
unmodified bacteriocins, 69–71
Late promoter transcription
anti-σ factors and, 237
LcrQ regulator
anti-σ factors and, 246
LdNT1 gene
Trypanosoma brucei surface receptors and transporters, 763
Leader peptides
lantibiotics and, 50–52, 54, 69–70
Leaves
modular organisms and, 105, 107
Legionella pneumophila
modular organisms and, 120
Legs
modular organisms and, 105
Leishmania spp.
Trypanosoma brucei surface receptors and transporters, 757–58, 762–64
Lemnia spp.
modular organisms and, 108
Leptomycin
HIV-1 Rev protein and, 512
Leucine
HIV-1 Rev protein and, 502–3, 505–6, 509–12, 518, 520
lantibiotics and, 46, 68
Leucothrix spp.
history of research, 8
Lichens
modular organisms and, 110
Life cycle
malarial parasite metabolism and, 561–63
nuclear targeting of animal DNA viruses and, 627, 642–45, 649–55, 657–61
Trypanosoma brucei surface receptors and transporters, 748–53
Ligands
regulation of gene expression and, 218–19
Trypanosoma brucei surface receptors and transporters, 757, 767, 770
virocrine transformation and, 401–7
Lipid bilayer
Trypanosoma brucei surface receptors and transporters, 751
Lipoproteins
Trypanosoma brucei surface receptors and transporters, 745, 747
Listeria monocytogenes
virulence genes of *Clostridium perfringens* and, 344
LLC-PK$_1$ cells
history of research, 35–37
LMTK$^-$ cells
history of research, 34
Locking into position
cooperative organization of bacterial colonies and, 794
Longevity
aging in *Saccharomyces cerevisiae* and, 533–55
Loops
Trypanosoma brucei surface receptors and transporters, 761, 767, 769
Low-density lipoprotein (LDL) receptor

Trypanosoma brucei and, 747, 757–58
LTK clones
history of research, 34
Lucinacea
CO_2 fixation in chemoautotrophs and, 195
Lysine
acetate metabolism regulation and, 140
lantibiotics and, 43, 46, 48
Lysosomes
Trypanosoma brucei surface receptors and transporters, 759
LysR-type transcriptional regulator
CO_2 fixation in chemoautotrophs and, 191, 207–11, 214–22

M

Macroorganisms
modular organisms and, 105–6, 123
Magainins
lantibiotics and, 42
Magnetic sorting
aging in *Saccharomyces cerevisiae* and, 548
Malarial parasite metabolism
carbohydrate metabolism
alternative electron transport, 570–72
classical electron transport, 568–70
glycolysis, 564–66
mitochondrial changes, 564
tricarboxylic acid cycle, 565–68
introduction, 562–64
nucleic acid synthesis
DNA synthesis, 576
folate biosynthesis, 572–74
pyrimidine biosynthesis, 572–74
RNA synthesis, 574–75
perspective, 582–83
protein synthesis
amino acids, 576–78
differentially expressed ribosomes, 581–82
protein synthesis inhibitors, 578
ribosomes, 578–82
rRNA classes, 579–81
Malate
malarial parasite metabolism and, 570
Malate dehydrogenase
malarial parasite metabolism and, 566–67
Malate synthase
acetate metabolism regulation and, 127, 133, 135, 137
Maltose
history of research, 8
Mammmals
aging in *Saccharomyces cerevisiae* and, 544–46
nuclear targeting of animal DNA viruses and, 627–69
thymineless death and, 593, 613, 616
Trypanosoma brucei surface receptors and transporters, 745–71
Mannose
Trypanosoma brucei surface receptors and transporters, 761
MAP kinases
cell polarity and morphogenesis in budding yeast, 725–31
MAT cells
cell polarity and morphogenesis in budding yeast, 689–91
Mating response
cell polarity and morphogenesis in budding yeast, 714–19, 726–27
Melaminophenyl arsenical drugs
Trypanosoma brucei surface receptors and transporters, 761–62, 771
Melarsoprol
Trypanosoma brucei surface receptors and transporters, 762
Membrane transport
in mammalian cells
history of research, 13, 17, 31–37
Membranipora spp.
modular organisms and, 108–9
Mercury resistance
nosocomial outbreaks caused by nontuberculous mycobacteria and, 458–59
Mersacidin
lantibiotics and, 41, 45–50, 52, 54–57, 60–61, 64–65, 67
Messenger RNA (mRNA)
acetate metabolism regulation and, 149
anti-σ factors and, 233
CO_2 fixation in chemoautotrophs and, 215
HIV-1 Rev protein and, 492, 494, 496–500
lantibiotics and, 55
malarial parasite metabolism and, 570
nuclear targeting of animal DNA viruses and, 633
thymineless death and, 600
Trypanosoma brucei surface receptors and transporters, 769
virulence genes of *Clostridium perfringens* and, 341
Metabolic coordination
bacterial multicellularity and, 81–97
Metabolism
acetate
protein phosphorylation in enteric bacteria and, 127–56
aging in *Saccharomyces cerevisiae* and, 541–42
anaerobiosis in *Bacillus subtilis* and, 159, 165–86
carbohydrate, 2, 7–8
kynurenine, 7
pyruvate, 183
thymine
in prokaryotes and eukaryotes, 591–616
Trypanosoma brucei surface receptors and transporters, 748–53
Metacyclic expression
Trypanosoma brucei surface receptors and transporters, 749, 753, 755
meta pathway
hybrid pathways for chloroaromatics and, 288, 305–6, 308–9, 311, 316–18, 321–23
Metastases
paclitaxel and, 361–92
Metazoa
Trypanosoma brucei surface receptors and transporters, 763
Methanobacillus omelianskii
bacterial multicellularity and, 93
Methanogenic conditions
microbial dehalogenation of chlorinated solvents and, 437, 440
Methanosarcina spp.
bacterial multicellularity and, 92
Methionine
anti-σ factors and, 243
history of research, 21

malarial parasite metabolism and, 577
Methotrexate
thymineless death and, 613
3-Methyllanthionine
lantibiotics and, 43
Methylobacterium extorqueus
acetate metabolism regulation and, 135
Michaelis-Menten constants
acetate metabolism regulation and, 145
Michigan
microbial dehalogenation of chlorinated solvents and, 433, 435, 438, 442–44
Microbial dehalogenation
of chlorinated solvents
chlorinated solvent biodegradation in presence of different electron acceptors, 432–33
co-metabolic oxidations, 428–29
co-metabolic reductions, 429–30
combined anaerobic-aerobic conditions, 440–41
complex aquifer environments, 430–31
dehalorespiration, 429
denitrifying conditions, 437
distribution of dechlorinators, 433–34
economics, 445–47
electron donor for reductive dehalogenation, 434–36
energy-yielding reductions, 429
energy-yielding oxidations, 428
field applications of reductive dehalogenation, 437–41
in situ conditions for reductive dehalogenation, 431–32
in situ engineered approaches, 431–41
introduction, 424–27
maximum solvent concentrations, 434
methanogenic conditions, 437, 440
micronutrients, 436
natural attenation approaches, 441–45
pathways, 427–28
remediation technology cost and performance, 446–47
sulfate-reducing conditions, 437, 440
vitamins, 436
Microcin B17
lantibiotics and, 43–44
Micrococcus radiodurans
thymineless death and, 593, 596
Micrococcus spp.
thymineless death and, 596
Micrococcus varians
lantibiotics and, 45
Microcolonies
modular organisms and, 105
Micronutrients
microbial dehalogenation of chlorinated solvents and, 436
Microtubules
cell polarity and morphogenesis in budding yeast, 711
Middle promoter activation
anti-σ factors and, 236–37
Mineralization
chloromatics and, 287–323
Mitochondria
malarial parasite metabolism and, 564–65, 567–70, 572
Mitochondrial DNA (mtDNA)
thymineless death and, 611
Mitomycin C
malarial parasite metabolism and, 576
thymineless death and, 602
Mn Oxidizer (SI85-9A1)
CO_2 fixation in chemoautotrophs and, 208
Mobility
modular organisms and, 105–6, 111–12, 123
Modification enzymes
lantibiotics and, 41, 52, 57–58
Modular organisms
bacteria as
cells vs modules, 110–11
evolutionary origins of a modular-based architecture, 116–19
immortality, 112–15
large-size benefits, 119–21
mobility, 111–12
morphogene antiquity, 115–16
motility, 111–12
organismal level, 120, 122
introduction, 106–7
nature of modularity, 107–10
Molecular biology
CO_2 fixation in chemoautotrophs and, 191
Monoctone
malarial parasite metabolism and, 573
Moraxella ssp.
paclitaxel and, 373–74
Morphogenesis
anti-σ factors and, 238–42
budding yeast and, 687–731
modular organisms and, 105–23
Morphotype
cooperative organization of bacteria and, 779–803
Mortierella rammanianna
paclitaxel and, 382
Mortierella spp.
paclitaxel and, 379
Mosquitoes
malarial parasite metabolism and, 561–83
MotA protein
anti-σ factors and, 236–37
Mother cells
aging in *Saccharomyces cerevisiae* and, 533–55
Motility
cooperative organization of bacterial colonies and, 779, 794
modular organisms and, 111–12
MucA protein
anti-σ factors and, 259–62, 272
Multicellularity bacterial
adaptive benefits from multicellular cooperation, 92–97
Bacillus subtilis, 90
cellular and multicellular views of bacterial populations, 97
cellular division of labor, 92–93
chemical messages in informationally rich environment, 87–88
collective defense against antagonists, 94
coordinated multicellular behaviors, 88–89
core concepts, 83
diverse classes of signal molecules, 83–86
Escherichia coli, 88–89
exchange of genetic information, 95–96
granule development in anaerobic bioreactors, 91–92
intercellular communication, 83–88
introduction, 82–83
isolated cells, 93–94
mutation, 96–97
optimization of population survival by differentiation

into distinct cell types, 94–97
Proteus spp., 90–91
resources/niches requiring a critical mass, 93–94
Serratia spp., 90–91
signal response systems, 87–88
sporulation and formation of dormant cells, 95
swarming, 90–91
Multi-hit theories
aging in *Saccharomyces cerevisiae* and, 536
Municipal water systems
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455, 458
Mus musculus
aging in *Saccharomyces cerevisiae* and, 535
Mutacin
lantibiotics and, 45–46
Mutations
aging in *Saccharomyces cerevisiae* and, 552–53
anaerobiosis in *Bacillus subtilis* and, 177–78
bacterial multicellularity and, 96–97
history of research, 4–5, 13, 16, 21–37
lantibiotics and, 59
modular organisms and, 113
thymineless death and, 594, 597, 603–13, 615–16
Trypanosoma brucei surface receptors and transporters, 756, 763, 769
virulence genes of *Clostridium perfringens* and, 348–49
Mycobacteria
nontuberculous
bronchoscopy-related pseudo-outbreaks, 472–79
contaminated and/or malfunctioning bronchoscopes, 473, 476
contaminated automated endoscope washers, 477–79
contaminated tap water, 476–77
contaminated terminal rinse water, 476–77
contaminated topical anesthesia, 473
disseminated *Mycobacterium avium* disease in AIDS, 470–71
miscellaneous outbreaks, 471–72
Mycobacterium avium complex, 483
Mycobacterium gordonae, 484
Mycobacterium kansasii, 485
Mycobacterium simiae, 484
Mycobacterium terrae complex, 484
Mycobacterium xenopi, 484
non-bronchoscopy-related pseudo-outbreaks, 479–85
nosocomial outbreaks and, 453–85
nosocomial pseudo-outbreaks, 472–85
rapidly growing, 482–83
Mycobacterium abcessus
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453, 455–56, 474, 480
Mycobacterium avium intracellulare complex (MAC)
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453, 455, 470–71, 474–75, 480, 483
Mycobacterium chelonae
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455–56
Mycobacterium fortuitum
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453, 455–56, 474, 480
Mycobacterium gordonae
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455–56, 475, 481, 484
Mycobacterium kansasii
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455, 481, 485
Mycobacterium leprae
anti-σ factors and, 235
Mycobacterium mucogenicum
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455–56
Mycobacterium perigrinum
nosocomial outbreaks caused by nontuberculous mycobacteria and, 480
Mycobacterium simiae
nosocomial outbreaks caused by nontuberculous mycobacteria and, 456, 481, 484
Mycobacterium spp.
microbial dehalogenation of chlorinated solvents and, 428
Mycobacterium terrae
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455–56, 481, 484
Mycobacterium tuberculosis
anti-σ factors and, 235
Mycobacterium xenopi
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453, 456, 475, 481, 484
Mycoplasma laidlawii
thymineless death and, 593
Myonecrosis
clostridial
virulence genes of *Clostridium perfringens* and, 333–54
Myxobacteria spp.
bacterial multicellularity and, 82, 87
cooperative organization of bacterial colonies and, 801–2
modular organisms and, 110, 115, 117–18, 122
Myxococcus spp.
modular organisms and, 118
Myxococcus xanthus
anti-σ factors and, 235, 257, 263–66
bacterial multicellularity and, 85–88, 93, 95
cooperative organization of bacterial colonies and, 801–2

N

Na^+
Trypanosoma brucei surface receptors and transporters, 760
Nalidixic acid
thymineless death and, 604
nan genes
virulence genes of *Clostridium perfringens* and, 347–48
nar operon
anaerobiosis in *Bacillus subtilis* and, 165–86

Natural attenuation approaches
microbial dehalogenation of chlorinated solvents and, 441–45
Negative regulation
anti-σ factors and, 255
acetate metabolism regulation and, 149–51
Neisseria gonorrhoeae
bacterial multicellularity and, 86, 95
Neisseria meningitidis
modular organisms and, 120–21
Neisseria spp.
modular organisms and, 113
The Netherlands
microbial dehalogenation of chlorinated solvents and, 439
Neurospora crassa
history of research, 4, 19, 38
Neurospora spp.
history of research, 3–5, 16–20
New Hampshire
microbial dehalogenation of chlorinated solvents and, 443–44
New Jersey
microbial dehalogenation of chlorinated solvents and, 439, 443
New wave pandemics
modular organisms and, 120–21
New York State
microbial dehalogenation of chlorinated solvents and, 438, 440, 443–44
nib1 mutants
aging in *Saccharomyces cerevisiae* and, 552–53
Niche-adapted clone model
modular organisms and, 114
Niches
bacterial multicellularity and, 93–94
CO_2 fixation in chemoautotrophs and, 192
nis genes
lantibiotics and, 57
Nisin
lantibiotics and, 41, 45–48, 50, 52–58, 60–62, 66–68, 70–71
Nitrate reductase
anaerobiosis in *Bacillus subtilis* and, 165–70, 171–86
Nitrate respiration
anaerobiosis in *Bacillus subtilis* and, 165–86
Nitrobacter agilis
CO_2 fixation in chemoautotrophs and, 202
Nitrobacter hamburgensis
CO_2 fixation in chemoautotrophs and, 202, 207
Nitrobacter spp.
CO_2 fixation in chemoautotrophs and, 204
Nitrobacter vulgaris
CO_2 fixation in chemoautotrophs and, 208–11, 215
Nitrobacter winogradskyi
CO_2 fixation in chemoautotrophs and, 202
Nitrosoguanidine
history of research, 23
Nitrosomonas spp.
CO_2 fixation in chemoautotrophs and, 202
microbial dehalogenation of chlorinated solvents and, 428
NLS viral protein
nuclear targeting of animal DNA viruses and, 627–69
Nocardia opaca
CO_2 fixation in chemoautotrophs and, 201–2
Nocardia salmonicolor
paclitaxel and, 382
Nocardia spp.
bacterial multicellularity and, 85
paclitaxel and, 379
Nocardioides albus
paclitaxel and, 370, 372–74
Nocardioides luteus
paclitaxel and, 370–74
Nomenclature
bacterial genetic, 30–31
Nonreplicative life span
aging in *Saccharomyces cerevisiae* and, 539–40
Nonthermophilic bacteria
nosocomial outbreaks caused by nontuberculous mycobacteria and, 457
Nontuberculous mycobacteria
introduction, 454–56
laboratory aspects of bacteria microbiology, 459–61
strain comparison, 460–63
nosocomial disease outbreaks, 461
cardiac surgery, 464–66
contaminated biologics for alternative medicine, 467–68
dialysis-related outbreaks, 469–70
inadequate sterilization needles/injection materials, 468
plastic surgery wound outbreaks, 468–69
postinjection abcesses, 466–68
vaccine-related outbreaks, 466–67
nosocomial epidemiology and pathogenesis
biofilms, 455–57
chlorine resistance, 458
formaldehyde resistance, 458
gentian violet resistance, 459
glutaraldehyde resistance, 458
growth in distilled water, 457–58
hospital water systems, 457
mercury resistance, 458–59
municipal water systems, 455, 458
non-thermophilic bacteria, 457
standard disinfectant resistance, 459
thermophilic bacteria, 457
virulence factors, 457–59
Nosocomial outbreaks
nontuberculous mycobacteria and, 453–85
N-terminal domain
Trypanosoma brucei surface receptors and transporters, 749–50, 756, 764, 769
Nuclear export/localization signal
HIV-1 Rev protein and, 491–521
Nuclear import signal
nuclear targeting of animal DNA viruses and, 628–69
Nuclear localization signal
nuclear targeting of animal DNA viruses and, 628–69
Nuclear magnetic resonance (NMR)
anti-σ factors and, 243, 274
lantibiotics and, 49–50
Nuclear pore complex
nuclear targeting of animal DNA viruses and, 628–69
Nuclear targeting
animal DNA viruses and, 627–69
Nucleic acid synthesis
malarial parasite metabolism and, 572–76

Nucleobases
Trypanosoma brucei surface receptors and transporters, 745, 761–63
Nucleolar fragmentation
aging in *Saccharomyces cerevisiae* and, 543
Nucleopore filters
history of research, 37
Nucleosides
thymineless death and, 591, 594
Trypanosoma brucei surface receptors and transporters, 745, 761–63
Nucleotidase
thymineless death and, 595
Nucleotide diphosphate reductase
thymineless death and, 594–95
Nucleotides
thymineless death and, 591, 594
Nucleus
cellular
HIV-1 Rev protein and, 491–521
targeting of animal DNA viruses and, 627–69
Nutrient uptake
thymineless death and, 591
Trypanosoma brucei surface receptors and transporters, 745, 770–71

O

Obligate autotrophs
CO_2 fixation in chemoautotrophs and, 192–93
Okazaki fragments
thymineless death and, 601–2
Oklahoma
microbial dehalogenation of chlorinated solvents and, 439–40
Old wave pandemics
modular organisms and, 120–21
Oligotropha carboxidovorans
CO_2 fixation in chemoautotrophs and, 207–8
Oncogenes
viral
virocrine transformation and, 397–414
One gene-one enzyme theory
history of research, 3
Oocyst
malarial parasite metabolism and, 562–63, 567, 573, 577, 579–80
Operator loci
history of research, 27
Operons
acetate metabolism regulation and, 137, 146–55
anaerobiosis in *Bacillus subtilis* and, 165–86
history of research, 21, 23, 27, 30–31
hybrid pathways for chloroaromatics and, 306, 308–9, 311–13, 316
thymineless death and, 591, 597
Organelles
anti-σ factors and, 244
malarial parasite metabolism and, 564, 567–70, 572, 578–82
polyhedral
CO_2 fixation in chemoautotrophs and, 191, 202–9
storage
Trypanosoma brucei surface receptors and transporters, 766–67
ortho pathway
modified
hybrid pathways for chloroaromatics and, 287–323
Ovarian cancer
paclitaxel and, 361–92
Ovine enterotoxemia
virulence genes of *Clostridium perfringens* and, 337
Oxazole rings
lantibiotics and, 44
Oxidation
microbial dehalogenation of chlorinated solvents and, 428–29
Oxidative decarboxylases
lantibiotics and, 58
Oxoadipate genes
hybrid pathways for chloroaromatics and, 311–12
3-Oxoadipate pathway
hybrid pathways for chloroaromatics and, 293–94
Oxygen
anaerobiosis in *Bacillus subtilis* and, 165–86
cooperative organization of bacterial colonies and, 794
hybrid pathways for chloroaromatics and, 288
malarial parasite metabolism and, 567, 570

P

Packing density
Trypanosoma brucei surface receptors and transporters, 752
Paclitaxel
alternative source, 386–88
antitumor studies, 366–67
baccatin III derivative coupling to paclitaxel side-chain intermediates, 385–86
biocatalytic hydrolysis of taxanes to 10-deacetylbaccatin III, 370–74
biocatalytic hydrolysis of xylosyltaxanes to 10-deacetylbaccatin III, 372–74
biosynthesis, 388–92
chemistry, 383–85
development of paclitaxel, 363–64
discovery of taxol, 362–63
distribution, 367–70
diterpene moiety, 388–92
diversity, 367–69
formulation studies, 364–65
fungal production of, 388
introduction, 362–63
mechanism of action, 365–66
nursery production of *Taxus* plants, 369
plant-cell culture for taxane synthesis, 386–87
semisynthesis, 369–86
side-chain biosynthesis, 389–92
side-chain intermediates, 375–86
structure, 364
total synthesis, 388
Paenibacillus dendritiformis
cooperative organization of bacterial colonies and, 782–83, 786, 788–89
Pandemics
modular organisms and, 120–21
Papillomaviruses
nuclear targeting of animal DNA viruses and, 634–35, 639–42
Papovaviruses
nuclear targeting of animal DNA viruses and, 628, 638–49
Para-aminobenzoic acid (PABA)

malarial parasite metabolism and, 573–74
Paracoccus denitrificans
CO_2 fixation in chemoautotrophs and, 220
Parasitology
history of research, 12
malarial parasite metabolism and, 561–83
Trypanosoma brucei surface receptors and transporters, 745–71
PARP protein
Trypanosoma brucei surface receptors and transporters, 752
Partial diploidy
history of research, 26–27
Parvoviruses
nuclear targeting of animal DNA viruses and, 628, 635, 649–52
Passive dispersal/mobility
modular organisms and, 105, 111
Patchwork assembly
mineralization of chloroaromatics by, 287–323
Pathogenesis
nosocomial outbreaks caused by nontuberculous mycobacteria and, 455–59
virulence genes of *Clostridium perfringens* and, 333–54
Pattern formation
cooperative organization of bacterial colonies and, 792–96
PB15 factor
history of research, 27
Pentamidine
Trypanosoma brucei surface receptors and transporters, 762
Pep5 factor
lantibiotics and, 45–48, 51–53, 56–57, 60, 67, 70
pep genes
lantibiotics and, 57
Peptide engineering
lantibiotics and, 66–68
Peptide-modifying enzymes
lantibiotics and, 41
Peptidoglycans
lantibiotics and, 64–65
modular organisms and, 119
Perfringolysin O
virulence genes of *Clostridium perfringens* and, 333–54
Periodic selection
modular organisms and, 113
Peripheral, funneling pathways
hybrid pathways for chloroaromatics and, 290–92
Peroxides
Trypanosoma brucei surface receptors and transporters, 759
pfoA gene
virulence genes of *Clostridium perfringens* and, 343–45
PgpA glycoprotein
Trypanosoma brucei surface receptors and transporters, 763–64
Phage induction
thymineless death and, 591, 593, 596–97, 605
Phenotype
anti-σ factors and, 245
bacterial multicellularity and, 81, 91
malarial parasite metabolism and, 581
modular organisms and, 114
Phenylalanine
history of research, 21
HIV-1 Rev protein and, 508
lantibiotics and, 46, 48
paclitaxel and, 389
Pheromones
bacterial multicellularity and, 95
cell polarity and morphogenesis in budding yeast, 689, 715–16, 718–19
lantibiotics and, 66, 69–71
Phosphate isomerase
malarial parasite metabolism and, 566
Phosphodeoxyribo aldolase
thymineless death and, 595
Phosphodeoxyribo mutase
thymineless death and, 595
Phospholipase
antibiotics and, 64–65
Phospholipase C
virulence genes of *Clostridium perfringens* and, 333–54
Phospholipids
anaerobiosis in *Bacillus subtilis* and, 184
Phospho-relay system
regulation of gene expression, transcripts, 220
Phosphoribulokinase
CO_2 fixation in chemoautotrophs and, 191, 199–211
Phosphorylation
acetate metabolism regulation and, 127–56
anti-σ factors and, 249–50
Photoautotrophic bacteria
regulation of gene expression and, 219–20
Photobacterium spp.
anti-σ factors and, 235, 257, 270
Photosynthesis
history of research, 2, 8
Photosynthetic algae
malarial parasite metabolism and, 583
Phylogeny
CO_2 fixation in chemoautotrophs and, 209–12
Physiology
CO_2 fixation in chemoautotrophs and, 191
cooperative organization of bacterial colonies and, 792–93
history of research, 11–13, 27
thymineless death and, 599–600
Phytomonas spp.
Trypanosoma brucei surface receptors and transporters, 757–58
Pichia methanolica
paclitaxel and, 382
Pigment production
anti-σ factors and, 231, 263
PKE mutants
history of research, 36–37
Plantaricin C11
lantibiotics and, 71
Plants
lantibiotics and, 41
malarial parasite metabolism and, 578
modular organisms and, 105, 118, 122
Plasma membrane
Trypanosoma brucei surface receptors and transporters, 748–50, 770
Plasmids
anaerobiosis in *Bacillus subtilis* and, 185
history of research, 24–27
hybrid pathways for chloroaromatics and, 303–5
thymineless death and, 591, 602, 609
Trypanosoma brucei surface receptors and transporters, 754–55, 768–69

virulence genes of *Clostridium perfringens* and, 333–54
Plasmodium berghei
malarial parasite metabolism and, 567, 569, 574, 576, 580–82
Plasmodium falciparum
malarial parasite metabolism and, 561–83
Plasmodium gallinaceum
malarial parasite metabolism and, 574, 577
Plasmodium knowlesi
malarial parasite metabolism and, 567, 577
Plasmodium lophurae
malarial parasite metabolism and, 565, 577
Plasmodium relictum
malarial parasite metabolism and, 577
Plasmodium vivax
malarial parasite metabolism and, 580
Plasmodium yoelii
malarial parasite metabolism and, 565, 568–70, 574–75, 578
Plastic surgery wound outbreaks
nontuberculous mycobacteria and, 468–69
Plastids
malarial parasite metabolism and, 575, 578, 583
Platelet-derived growth factor (PDGF) receptor
virocrine transformation and, 401–5
plc gene
virulence genes of *Clostridium perfringens* and, 339–43
Pleiotropic toxin mutants
virulence genes of *Clostridium perfringens* and, 348–49
Pneumococcus spp.
thymineless death and, 593
Podospora anserina
aging in *Saccharomyces cerevisiae* and, 552
Poeciliopsis spp.
modular organisms and, 112
Polarity-establishment components
cell polarity and morphogenesis in budding yeast, 704–6
Polarized growth
budding yeast and, 687–731
pol gene
HIV-1 Rev protein and, 492–98
Polyanionic rod-like domain
Trypanosoma brucei surface receptors and transporters, 752
Polyhedral organelles
CO_2 fixation in chemoautotrophs and, 191, 202–9
Polyhook phenotype
anti-σ factors and, 245
Polymerase chain reaction (PCR)
history of research, 37
malarial parasite metabolism and, 567, 570–71, 583
Polyomaviruses
middle T antigen
virocrine transformation and, 407–9
nuclear targeting of animal DNA viruses and, 635, 642–47
Pool sizes
thymineless death and, 591
Populus tremuloides
modular organisms and, 119
Pore formation
lantibiotics and, 49, 61–64
Positive control
acetate metabolism regulation and, 151–54
Postinjection abcesses
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453–85
Posttranslational modification
lantibiotics and, 41, 43, 50–54
Poxviruses
nuclear targeting of animal DNA viruses and, 627–28
Precursor peptides
lantibiotics and, 41
Preepidermin
lantibiotics and, 59
Prenisin
lantibiotics and, 59
Prepeptides
lantibiotics and, 41, 50–54
Primary core binding
anti-σ factors and, 234
Procyclic expression
Trypanosoma brucei surface receptors and transporters, 749, 752, 765
Producer self-protection
lantibiotics and, 60–61
Proflavin
history of research, 23
Program theories
aging in *Saccharomyces cerevisiae* and, 536–37
Projection formation
cell polarity and morphogenesis in budding yeast, 715–16
Prokaryotes
acetate metabolism regulation and, 141
bacterial multicellularity and, 81
CO_2 fixation in chemoautotrophs and, 192
modular organisms and, 106–7, 116–18, 123
thymine metabolism and thymineless death in, 591–616
Proline
lantibiotics and, 54
malarial parasite metabolism and, 577
virulence genes of *Clostridium perfringens* and, 343
Promoter genes
anti-σ factors and, 233, 236–37, 240
CO_2 fixation in chemoautotrophs and, 215
regulation of gene expression, transcripts, 214, 217–18
Propionibacterium acnes
lantibiotics and, 66
Propyl gallate
malarial parasite metabolism and, 570, 572
Proteases
lantibiotics and, 41, 51–53, 59–60
Trypanosoma brucei surface receptors and transporters, 764
Protegrins
lantibiotics and, 42
Protein nuclear entry
nuclear targeting of animal DNA viruses and, 636–38
Protein phosphorylation
acetate metabolism regulation and, 127–56
Proteins
viral
nuclear targeting of animal DNA viruses and, 641–42, 645–47, 651–52, 655–57
Protein status
anti-σ factors and, 267–68
Protein synthesis
malarial parasite metabolism and, 576–78
Proteolytic activation
lantibiotics and, 41, 52
Proteus mirabilis
anti-σ factors and, 242
bacterial multicellularity and, 90–91
thymineless death and, 593

Proteus spp.
bacterial multicellularity and, 81, 90–92
Proteus vulgaris
bacterial multicellularity and, 90–91
Protista
modular organisms and, 117
Proton suicide
history of research, 35
Protozoa
Trypanosoma brucei surface receptors and transporters, 763
Pseudohyphal growth
cell polarity and morphogenesis in budding yeast, 689–90, 703, 727–28
Pseudomonas acidovorans
hybrid pathways for chloroaromatics and, 294, 300–1
thymineless death and, 593, 596
Pseudomonas aeruginosa
anti-σ factors and, 235, 257, 259–61, 263, 268–70, 272–73
bacterial multicellularity and, 88, 94–95
hybrid pathways for chloroaromatics and, 293, 298, 300–1, 303, 305
thymineless death and, 596
Pseudomonas cepacia
hybrid pathways for chloroaromatics and, 295–97, 300–1, 304, 307, 310, 318–20, 322
paclitaxel and, 375, 380
Pseudomonas fluorescens
hybrid pathways for chloroaromatics and, 293–94, 304
Pseudomonas hydrogenothermophila
CO_2 fixation in chemoautotrophs and, 208, 210
Pseudomonas indigofera
acetate metabolism regulation and, 134
Pseudomonas oxalaticus
CO_2 fixation in chemoautotrophs and, 212, 219
Pseudomonas pseudoalcaligenes
hybrid pathways for chloroaromatics and, 297, 305, 307–8
Pseudomonas putida
anti-σ factors and, 235, 257, 270–71
bacterial multicellularity and, 86
hybrid pathways for chloroaromatics and, 293–98, 300–5, 307–8, 310–12, 314, 316, 318–21
paclitaxel and, 382
Pseudomonas saccharophila
history of research, 7
Pseudomonas spp.
anti-σ factors and, 259–64
CO_2 fixation in chemoautotrophs and, 196, 220
history of research, 8
hybrid pathways for chloroaromatics and, 295–321
Pseudomonas stutzeri
microbial dehalogenation of chlorinated solvents and, 433, 438
thymineless death and, 593, 596
Pseudomonas syringae
anti-σ factors and, 235
virulence genes of *Clostridium perfringens* and, 337
Pseudomonas testosteroni
hybrid pathways for chloroaromatics and, 294
paclitaxel and, 377, 380
Pseudo-outbreaks
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453, 456, 472–85
Pulpy kidney disease
virulence genes of *Clostridium perfringens* and, 337
Pup factors
anti-σ factors and, 270–71
Purine nucleoside phosphorylase
thymineless death and, 595
Purines
Trypanosoma brucei surface receptors and transporters, 771
Pyrimethamine
malarial parasite metabolism and, 573–74
Pyrimidines
malarial parasite metabolism and, 572–74, 582
Trypanosoma brucei surface receptors and transporters, 763
Pyruvate
anaerobiosis in *Bacillus subtilis* and, 183
malarial parasite metabolism and, 570
Trypanosoma brucei surface receptors and transporters, 749
Pyruvate dehydrogenase
anaerobiosis in *Bacillus subtilis* and, 165–86
Pyruvate formate lyase
anaerobiosis in *Bacillus subtilis* and, 165–86
Pyruvate kinase
malarial parasite metabolism and, 566

Q

Quorum sensing
bacterial multicellularity and, 84
lantibiotics and, 66
modular organisms and, 122

R

Ralstonia eutropha
CO_2 fixation in chemoautotrophs and, 200, 207–20
hybrid pathways for chloroaromatics and, 295–96, 302–4
Ramets
modular organisms and, 119
RAPD analysis
modular organisms and, 113
Rapid growth
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453–85
ras genes
aging in *Saccharomyces cerevisiae* and, 548–49
RAS protein
aging in *Saccharomyces cerevisiae* and, 533–55
RbsW factor
anti-σ factors and, 231
recBCD operon
thymineless death and, 591
Receptor law
cooperative organization of bacterial colonies and, 791–92
Receptors
cell polarity and morphogenesis in budding yeast, 715–16
nuclear targeting of animal DNA viruses and, 628

Trypanosoma brucei and, 745–71
virocrine transformation and, 397–407
RecF repair pathway
thymineless death and, 591
Recombination
thymineless death and, 607–8
Reduction
Trypanosoma brucei surface receptors and transporters, 749
Reductive dechlorination
microbial dehalogenation of chlorinated solvents and, 423–47
Regulation
anti-σ factors and, 235–36, 246–54
virulence genes of *Clostridium perfringens* and, 333–54
Regulatory proteins
CO_2 fixation in chemoautotrophs and, 191
lantibiotics and, 41
Regulons
anti-σ factors and, 238–40, 263–65
Replication
nuclear targeting of animal DNA viruses and, 630–35, 639–41
Replicative life span
aging in *Saccharomyces cerevisiae* and, 538–39
Repressor genes
CO_2 fixation in chemoautotrophs and, 219–20
history of research, 27
Repulsive signaling
cooperative organization of bacterial colonies and, 787, 800
ResD response regulator
anaerobiosis in *Bacillus subtilis* and, 165–86
ResE sensor kinase
anaerobiosis in *Bacillus subtilis* and, 165–86
Resources
bacterial multicellularity and, 93–94
Respiration
anaerobiosis in *Bacillus subtilis* and, 165–86
malarial parasite metabolism and, 565, 567, 570, 573
Response regulating elements
anaerobiosis in *Bacillus subtilis* and, 165–86
HIV-1 Rev protein and, 491–521
Retroviral genes
HIV-1 Rev protein and, 491–521
Reverse transcription-PCR
malarial parasite metabolism and, 567, 570, 583
Reversible phosphorylation
acetate metabolism regulation and, 127, 137–39
Rev protein
HIV-1 and, 491–521
Rhizobium leguminarosum
bacterial multicellularity and, 84
Rhizobium meliloti
anaerobiosis in *Bacillus subtilis* and, 172, 179
Rhizomorphs
modular organisms and, 111
Rho1p protein
cell polarity and morphogenesis in budding yeast, 687–731
Rhodobacter capsulatus
CO_2 fixation in chemoautotrophs and, 208, 210–11, 213, 215–16, 220
Rhodobacter sphaeroides
anti-σ factors and, 235
CO_2 fixation in chemoautotrophs and, 200, 208, 210–11, 213, 215–16, 219–20, 222
Rhodococcus erythropolis
paclitaxel and, 382
Rhodococcus globerulus
hybrid pathways for chloroaromatics and, 304, 307
Rhodococcus spp.
microbial dehalogenation of chlorinated solvents and, 428
paclitaxel and, 379
Rhodomicrobium vannieli
acetate metabolism regulation and, 141
Rhodopseudomonas acidophila
CO_2 fixation in chemoautotrophs and, 200
Rhodospirillum rubrum
CO_2 fixation in chemoautotrophs and, 199, 208, 210, 215–16, 219–20
Rho proteins
cell polarity and morphogenesis in budding yeast, 698–99, 708–10
Ribosomal DNA (rDNA)
aging in *Saccharomyces cerevisiae* and, 553–55
malarial parasite metabolism and, 579
Ribosomally-made peptides
lantibiotics and, 41–71
Ribosomal RNA (rRNA)
malarial parasite metabolism and, 570–71, 579–81
Ribosomes
history of research, 8
HIV-1 Rev protein and, 518
malarial parasite metabolism and, 578–82
Ribulose biphosphate carboxylase/oxygenase (RuBisCO)
CO_2 fixation in chemoautotrophs and, 191, 199–211
Rifampin
malarial parasite metabolism and, 575
RNA nuclear export
HIV-1 Rev protein and, 491–521
RNA polymerase
anti-σ factors and, 231–74
thymineless death and, 600
RNA synthesis
malarial parasite metabolism and, 574–75
Romania
CO_2 fixation in chemoautotrophs and, 196
Rotenone
malarial parasite metabolism and, 570
Rothera reaction
hybrid pathways for chloroaromatics and, 294
RpoD box
anti-σ factors and, 234
RpoE factor
anti-σ factors and, 266–70
RsbU-RsbV-RsbW regulatory module
anti-σ factors and, 250–51
RsbV factor
anti-σ factors and, 250
RsbW factor
anti-σ factors and, 245, 250–54
RsbX-RsbR-RsbS-RsbT regulatory module
anti-σ factors and, 251–54
RseA factor
anti-σ factors and, 266–69
Rsr proteins

cell polarity and morphogenesis in budding yeast, 696–97

S

  virulence genes of *Clostridium perfringens* and, 347
Salvia spp.
  modular organisms and, 108
Schizosaccharomyces pombe
  HIV-1 Rev protein and, 511–12
  virulence genes of *Clostridium perfringens* and, 340
Secondary core binding anti-σ factors and, 234
Sedimentary environments in situ
    microbial dehalogenation of chlorinated solvents and, 423–47
Sedoheptulose biphosphatase
  CO_2 fixation in

chemoautotrophs and, 191, 199–211
Segmental gene conversion transporters
Trypanosoma brucei surface receptors and, 768
Selection
modular organisms and, 113
Semisynthesis
paclitaxel and, 361–92
Senescence
aging in *Saccharomyces cerevisiae* and, 552–53
Senescence factor
aging in *Saccharomyces cerevisiae* and, 537
Sensitivity amplification
acetate metabolism regulation and, 145–46
Sensor kinases
anaerobiosis in *Bacillus subtilis* and, 165–86
Septins
cell polarity and morphogenesis in budding yeast, 693, 710–11
Serine
acetate metabolism regulation and, 140
lantibiotics and, 43–44, 50–51, 53
Serine proteases
lantibiotics and, 59
Serratia liquefaciens
bacterial multicellularity and, 91
Serratia marcescens
acetate metabolism regulation and, 140
bacterial multicellularity and, 91
Serratia spp.
bacterial multicellularity and, 81, 90–91
Sessility
modular organisms and, 105–6, 111
Sexuality
malarial parasite metabolism and, 561–83
Sex factors
history of research, 17, 24–30
Sfa gene
history of research, 26–29
SGS1 gene
aging in *Saccharomyces cerevisiae* and, 551–52
SHAM
malarial parasite metabolism and, 570, 572–73
Trypanosoma brucei surface receptors and transporters, 749
Shewanella alga
microbial dehalogenation of chlorinated solvents and, 436
Shigella sonnei
modular organisms and, 120
Shigella spp.
anti-σ factors and, 242
Showdomycin
thymineless death and, 597
Shuttling
HIV-1 Rev protein and, 491–521
Sialidase genes
virulence genes of *Clostridium perfringens* and, 347–48
σ-factors
bacterial multicellularity and, 95
Signal transduction
anaerobiosis in *Bacillus subtilis* and, 165–86
bacterial multicellularity and, 81, 83–88
cell polarity and morphogenesis in budding yeast, 696–97, 725–31
cooperative organization of bacterial colonies and, 779– 803
HIV-1 Rev protein and, 491–521
Trypanosoma brucei surface receptors and transporters, 756
virocrine transformation and, 397–414
virulence genes of *Clostridium perfringens* and, 333–54
Silencing
aging in *Saccharomyces cerevisiae* and, 543
Trypanosoma brucei surface receptors and transporters, 765
Simian virus 40 (SV40)
nuclear targeting of animal DNA viruses and, 631–32, 647–49
Sinefungin
Trypanosoma brucei surface receptors and transporters, 763
Single-gene mutants
history of research, 5
Single-stranded DNA (ssDNA) breaks
thymineless death and, 591, 601–3, 610, 613–16
Sinks
HIV-1 Rev protein and, 521
SIR-42 genes
aging in *Saccharomyces cerevisiae* and, 550–51
Slime
extracellular
cooperative organization of bacterial colonies and, 799
Slime capsules
lantibiotics and, 68
Slime molds
modular organisms and, 118, 122
Slt2p pathway
cell polarity and morphogenesis in budding yeast, 728–30
SMK1 pathway
cell polarity and morphogenesis in budding yeast, 730–31
Sodium/proton antiporter
history of research, 35–37
Solemya spp.
CO_2 fixation in chemoautotrophs and, 195
Solvent oxidations
microbial dehalogenation of chlorinated solvents and, 428
Solvent plumes
chlorinated, 423–47
Somatic cells
modular organisms and, 105, 107–8
SOS genes
thymineless death and, 599, 601, 606–7, 614
Specificity
enzyme and effector
hybrid pathways for chloroaromatics and, 287–323
Spiral vortex morphotype
cooperative organization of bacterial colonies and, 797–98
Spleen focus-forming virus gp55
virocrine transformation and, 397–14
Splicing
HIV-1 Rev protein and, 493–97
SpoIIAB factor
anti-σ factors and, 245–49
SpoIIE factor
anti-σ factors and, 247–49
Sporogonic stage
malarial parasite metabolism and, 561, 563–74
Sporozoite
malarial parasite metabolism and, 562–63, 568–69

Sporulation
bacterial multicellularity and, 95
Sporulation-associated enterotoxin
virulence genes of *Clostridium perfringens* and, 333–54
Sporulation regulatory cascade
Bacillus, anti-σ factors and, 246–49
Stability
genome
aging in *Saccharomyces cerevisiae* and, 545–46
Standard disinfectant resistance
nosocomial outbreaks caused by nontuberculous mycobacteria and, 459
Staphylococcin C55
lantibiotics and, 49
Staphylococcus aureus
bacterial multicellularity and, 85, 94
lantibiotics and, 67
thymineless death and, 593
virulence genes of *Clostridium perfringens* and, 345
Staphylococcus epidermidis
lantibiotics and, 45, 67
Staphylococcus gallinarum
lantibiotics and, 45
Staphylococcus spp.
thymineless death and, 596, 607
Starvation
thymineless death and, 591–616
Stationary-phase death
thymineless death and, 593–94, 615–16
Stereoinverted amino acids
lantibiotics and, 41
Sterility
aging in *Saccharomyces cerevisiae* and, 533–55
Sterilization procedures
nontuberculous mycobacteria and, 468
Sternal wound infections
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453–85
Stigmatella aurantica
bacterial multicellularity and, 85
Stochastic trigger
aging in *Saccharomyces cerevisiae* and, 537
Strain comparison methods
nontuberculous mycobacteria and, 460–63
Strain specificity
thymineless death and, 598
Streptococcin A-FF22
lantibiotics and, 48, 53
Streptococcus faecalis
thymineless death and, 593, 598, 600
Streptococcus mutans
lantibiotics and, 45, 49
Streptococcus pneumoniae
bacterial multicellularity and, 84–85
virulence genes of *Clostridium perfringens* and, 337
Streptococcus pyogenes
lantibiotics and, 45, 55
Streptococcus salivarius
lantibiotics and, 45, 55
Streptococcus spp.
thymineless death and, 596
Streptomyces alboniger
bacterial multicellularity and, 85
Streptomyces aureofaciens
anti-σ factors and, 243
Streptomyces cinnamoneus
lantibiotics and, 45
Streptomyces coelicolor
acetate metabolism regulation and, 149
anti-σ factors and, 235, 243, 257
bacterial multicellularity and, 95
Streptomyces collinus
acetate metabolism regulation and, 135
Streptomyces griseolutens
lantibiotics and, 45
Streptomyces griseus
bacterial multicellularity and, 85, 87
Streptomyces spp.
bacterial multicellularity and, 82, 84–85, 93
lantibiotics and, 45, 48
modular organisms and, 117
Streptomyces virginiae
bacterial multicellularity and, 85
Streptomyces viridochromogenes
bacterial multicellularity and, 85
Streptomycin
history of research, 6, 8
Streptoverticillium spp.
bacterial multicellularity and, 85
lantibiotics and, 45
Stress response
anti-σ factors and, 231
Strict aerobes
anaerobiosis in *Bacillus subtilis* and, 165–86
Structural genes
acetate metabolism regulation and, 146–48
Structure-function relationships
nuclear targeting of animal DNA viruses and, 627–69
virulence genes of *Clostridium perfringens* and, 353–54
Substrate analogus
Trypanosoma brucei surface receptors and transporters, 747
Subtilin
lantibiotics and, 45, 48, 52–53, 55–58, 60, 66–67
Succinate
acetate metabolism regulation and, 133
Succinate dehydrogenase
malarial parasite metabolism and, 567–68, 570, 582
Sucrose
history of research, 8
Sucrose gradient centrifugation
aging in *Saccharomyces cerevisiae* and, 546–47
Sugar transporters
Trypanosoma brucei and, 760–61
Sulfate reducers
microbial dehalogenation of chlorinated solvents and, 437, 440
modular organisms and, 117
Sulfolobus acidocaldarius
anti-σ factors and, 235
thymineless death and, 593
Sulfonamides
malarial parasite metabolism and, 573
Sulfones
malarial parasite metabolism and, 573
Sulformethoxine
malarial parasite metabolism and, 574
Superinduction
of Calvin cycle genes
CO_2 fixation in chemoautotrophs and, 216–17
Suppressor mutants
anaerobiosis in *Bacillus subtilis* and, 177–78
history of research, 23
Surface receptors/transporters
Trypanosoma brucei and, 745–71
Survival genes
thymineless death and, 592, 615
Swarming

bacterial multicellularity and, 90–91
cooperative organization of bacterial colonies and, 799–801
Swimmer cells
bacterial multicellularity and, 90
Switching
gene
Trypanosoma brucei surface receptors and transporters, 754, 767
Symbiosis
CO_2 fixation in chemoautotrophs and, 191–222
Synechocystis spp.
anti-σ factors and, 235
virulence genes of *Clostridium perfringens* and, 340
Synecococchus PCC7942
CO_2 fixation in chemoautotrophs and, 202, 204–5, 207, 209
Synthons
C-13 side chain
paclitaxel and, 361–92
Syntrophobacter spp.
bacterial multicellularity and, 92
Syntrophomonas spp.
bacterial multicellularity and, 92
Systemic senescence
modular organisms and, 105, 107

T

θ-toxin
virulence genes of *Clostridium perfringens* and, 333–54
Tachyplesins
lantibiotics and, 42
Tap water
contaminated
nontuberculous mycobacteria and, 476
Targeting
nuclear
animal DNA viruses and, 627–69
Taxanes
paclitaxel and, 370–72, 386–87
Taxol
biocatalysis for semisynthesis and, 361–92
Taxolase
paclitaxel and, 361–92
Taxomyces andeanae
paclitaxel and, 388–89
Taxonomy
history of research, 2
Taxus brevifolia
paclitaxel and, 361–92
Teicoplanin
lantibiotics and, 67
Telomeres
aging in *Saccharomyces cerevisiae* and, 536–37, 544
Trypanosoma brucei surface receptors and transporters, 753
Temperature-dependent regulation
anti-σ factors and, 267
Temporal regulation
anti-σ factors and, 235–36
Terminal electron acceptors
anaerobiosis in *Bacillus subtilis* and, 165–86
Terminal rinse water
contaminated
nontuberculous mycobacteria and, 476–77
Terracing
bacterial multicellularity and, 91
Tetrahydrofolate
malarial parasite metabolism and, 573
Tetraploidy
malarial parasite metabolism and, 576
Texas
microbial dehalogenation of chlorinated solvents and, 434–35, 437–41
Thermus aquaticus
acetate metabolism regulation and, 136
Thermophilic bacteria
nosocomial outbreaks caused by nontuberculous mycobacteria and, 457
Thiazoles
lantibiotics and, 41, 44
Thiobacillus denitrificans
CO_2 fixation in chemoautotrophs and, 199, 208, 210, 215, 217
Thiobacillus ferrooxidans
CO_2 fixation in chemoautotrophs and, 194, 208, 210, 214–18
Thiobacillus intermedius
CO_2 fixation in chemoautotrophs and, 199, 205, 208–9, 215, 217, 220
Thiobacillus neapolitanus
CO_2 fixation in chemoautotrophs and, 199–205, 207–10, 215, 217
Thiobacillus thioparus
CO_2 fixation in chemoautotrophs and, 197
Thiobacillus thyasiris
CO_2 fixation in chemoautotrophs and, 202
Thiobacillus versutus
CO_2 fixation in chemoautotrophs and, 201
Thioethers
lantibiotics and, 41, 49, 51, 53, 57–58
Thiomicrospira spp.
CO_2 fixation in chemoautotrophs and, 196
Thionins
lantibiotics and, 42
Thiothrix spp.
CO_2 fixation in chemoautotrophs and, 196
history of research, 8
Thiovulum spp.
CO_2 fixation in chemoautotrophs and, 194
Threonine
anti-σ factors and, 243
lantibiotics and, 43, 50–51
thr locus
history of research, 30
Thymidine kinase
thymineless death and, 595
Thymidine phosphorylase
thymineless death and, 595
Thymidylate synthetase
thymineless death and, 595
Thymine
history of research, 22
Thymineless death
thymine metabolism and
bacterial selection, 596
biochemical changes, 599–600
biological effects of thymine starvation, 609–10
conjugation, 608
death from mutation in other genes, 615–16
DNA repair mutations, 603–7
dTMP mutants, 610–13
genetic recombination, 608
hypothesis for thymineless death, 613–15
introduction, 592–94
kinetics, 598
mammalian thymineless death, 613

molecular effects of thymine starvation, 600–3
mutagenesis, 608–9
perspective, 616
phage selection, 596–97
physiological changes, 599–600
Saccharoimyces cerevisiae, 610–13
strain specificity, 598
techniques for thymine starvation, 597–98
thymidylate biosynthesis, 610–13
thymine ayxotrophic mutant selection, 597
thymine metabolism overview, 594–96
Tip-splitting morphotype
cooperative organization of bacterial colonies and, 779, 782–85
dTMP mutants
thymineless death and, 594, 610–13
Toluene genes
hybrid pathways for chloroaromatics and, 308–10
Topical anesthesia
contaminated
nosocomial outbreaks caused by nontuberculous mycobacteria and, 473
Toxins
virulence genes of *Clostridium perfringens* and, 333–54
Transcriptional regulation
acetate metabolism regulation and, 127, 137
anti-σ factors and, 235–40
CO_2 fixation in chemoautotrophs and, 191, 207–22
Transferrin receptors
Trypanosoma brucei surface receptors and transporters, 746–71
Transfer RNA (tRNA)
HIV-1 Rev protein and, 518
Transformation
thymineless death and, 591
virocrine, 397–414
Translocation
Trypanosoma brucei surface receptors and transporters, 748
Transmethylation
Trypanosoma brucei surface receptors and transporters, 763
Transmission
malarial parasite metabolism and, 561–83
Transport
anti-σ factors and, 231
HIV-1 Rev protein and, 491–521
nuclear targeting of animal DNA viruses and, 627–69
Trypanosoma brucei and, 745–71
Transposons
lantibiotics and, 55
Tricarboxylic acid cycle
acetate metabolism regulation and, 127–29, 132–35, 139
anaerobiosis in *Bacillus subtilis* and, 179–80
anti-σ factors and, 234
bacterial multicellularity and, 87
malarial parasite metabolism and, 565–68
Triggering field
cooperative organization of bacterial colonies and, 794
Triose phosphate isomerase
malarial parasite metabolism and, 566
Trophozoite
malarial parasite metabolism and, 566, 570, 580
Trypanathione
Trypanosoma brucei surface receptors and transporters, 763–64
Trypanosoma brucei
surface receptors and transporters
ABC-type drug transporters, 763–64
adenylate/guanylate cyclases, 756–57
antigenic variation, 770–71
background, 748–53
dimerization, 768–70
expression site associated genes, 754–56
food uptake, 770–71
high-density lipoprotein receptor, 758–59
introduction, 746–48
invariant surface glycoproteins in search of a function, 764
life cycle, 748–53
low-density lipoprotein receptor, 757–58
mammalian hosts, 770–71
metabolism, 748–53
nucleobase transporter, 761–63
nucleoside transporter, 761–63
outlook, 771
putative EGF receptor, 759–60
putative interferon γ receptor, 760
sugar transporters, 760–61
transferrin receptor, 764–70
Trypanosoma equiperdum, 754–56
trypanosome lytic factor receptor, 759
VSG genes, 753–54, 768–70
Trypanosoma congolense
Trypanosoma brucei surface receptors and transporters, 769
Trypanosoma cruzi
Trypanosoma brucei surface receptors and transporters, 760, 762
Trypanosoma equiperdum
Trypanosoma brucei surface receptors and transporters, 754–56
Trypanosoma vivax
Trypanosoma brucei surface receptors and transporters, 760
Trypanosome lytic factor (TLF) receptor
Trypanosoma brucei surface receptors and transporters, 759
Trypomastigote
Trypanosoma brucei surface receptors and transporters, 748–49
Tryptophan
lantibiotics and, 46
Tsetse fly
Trypanosoma brucei surface receptors and transporters, 748–50, 753, 759
Tumorigenesis
virocrine transformation and, 397–414
Tumor necrosis factor (TNF)
virocrine transformation and, 397–414
Tunicamycin
Trypanosoma brucei surface receptors and transporters, 755
Turbulent-like collective flow
cooperative organization of bacterial colonies and, 796
Twigs

modular organisms and, 105, 107
Two-component signal transduction
anaerobiosis in *Bacillus subtilis* and, 165–86
virulence genes of *Clostridium perfringens* and, 333–54
Tyrosine
history of research, 21
malarial parasite metabolism and, 577
Tyrosine kinases
virocrine transformation and, 397–414

U

Ubiquinone
malarial parasite metabolism and, 570, 573
UMP kinase
thymineless death and, 595
dUMP phosphatase
thymineless death and, 595
UMP pyrophosphorylase
thymineless death and, 595
Uncoating
nuclear targeting of animal DNA viruses and, 659–60
Unitary organisms
modular organisms and, 105–23
United States
microbial dehalogenation of chlorinated solvents and, 433–45
Unsaturated amino acids
lantibiotics and, 41, 43
Upstream activating sequences
anti-σ factors and, 233
Uridine kinase
thymineless death and, 595
Uridine phosphorylase
thymineless death and, 595
UTH genes
aging in *Saccharomyces cerevisiae* and, 550–51

V

Vaccine-related outbreaks
nontuberculous mycobacteria and, 466–67
Valine
cooperative organization of bacterial colonies and, 795–96
history of research, 5, 16–20, 38
lantibiotics and, 46
Vancomycin
lantibiotics and, 67
Variacin
lantibiotics and, 45, 48
Vasopressin
history of research, 34–35
Vectors
malarial parasite metabolism and, 561–83
Vegetative growth
cell polarity and morphogenesis in budding yeast, 689–90
Vesicomycidae
CO_2 fixation in chemoautotrophs and, 195
Vhf donors
history of research, 29
Vibrio fischeri lux
bacterial multicellularity and, 84
Vibrio spp.
acetate metabolism regulation and, 141
Viral transforming proteins
virocrine transformation and, 397–414
vir genes
virulence genes of *Clostridium perfringens* and, 333–54
Virions
nuclear targeting of animal DNA viruses and, 627–69
Virocrine transformation
growth factor implications, 411–14
growth factor receptor activation by viral proteins not resembling normal ligands
BPV E5 protein and PDGF β receptor, 401–5
Friend erythroleukemia virus gp55 and erythropoietin receptor, 405–7
growth factor receptor function, 398–400
introduction, 398
viral proteins that mimic activated growth factor receptors
EBV virus LMP-1, 409–10
polyoma middle T antigen, 407–9
Virulence
anti-σ factors and, 231, 246, 271–72
Clostridium perfringens and, 333–54
nosocomial outbreaks caused by nontuberculous mycobacteria and, 457–59
Viruses
history of research, 1–2, 8, 10, 12
HIV-1 Rev protein and, 491–521
nuclear targeting of animal DNA viruses, 627–69
Vitamins
microbial dehalogenation of chlorinated solvents and, 436
Vortex morphotype
cooperative organization of bacterial colonies and, 779, 782–83, 796–800
VSG genes
Trypanosoma brucei surface receptors and transporters, 746–71

W

Wake-up pheromones
bacterial multicellularity and, 95
Walker motifs
lantibiotics and, 59
Warm vents
CO_2 fixation in chemoautotrophs and, 196
Washington State
microbial dehalogenation of chlorinated solvents and, 437–38
Wastewater streams
hybrid pathways for chloroaromatics and, 288
Water
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453–85
Werner's syndrome
thymineless death and, 616
Wings
modular organisms and, 105
Wolf pack strategy
bacterial multicellularity and, 93
"Worm" motion
cooperative organization of bacterial colonies and, 799
Wounds
nosocomial outbreaks caused by nontuberculous mycobacteria and, 453–85
WR99210
malarial parasite metabolism and, 573

X

Xanthine

Trypanosoma brucei surface receptors and transporters, 763
Xanthobacter flavus
CO_2 fixation in chemoautotrophs and, 201–2, 208, 210–21
hybrid pathways for chloroaromatics and, 299–301
Xenobiotics
hybrid pathways for chloroaromatics and, 288
Xenopus laevis
aging in *Saccharomyces cerevisiae* and, 552
HIV-1 Rev protein and, 499, 501, 509–12, 515, 517–20
Trypanosoma brucei surface receptors and transporters, 765, 769
X-ray crystallography
lantibiotics and, 49
paclitaxel and, 363
Trypanosoma brucei surface receptors and transporters, 749–50
Xylene genes
hybrid pathways for chloroaromatics and, 307–8
Xylosidase
paclitaxel and, 361–92
Xylosyltaxanes
paclitaxel and, 372–74

Y

Yeasts
aging and, 533–55
cell polarity and morphogenesis in, 687–731
HIV-1 Rev protein and, 505, 510–13
thymineless death and, 591, 610–13
Trypanosoma brucei surface receptors and transporters, 750, 756
Yersinia enterocolitica
anti-σ factors and, 242
Yersinia pseudotuberculosis
anti-σ factors and, 246

Z

Zero-order sensitivity
acetate metabolism regulation and, 145
